

It's time to **celebrate** our resistance: digger diving, window smashing, pleasant picnicking, office occupying, hoody wearing, GM crop trashing, squat cracking, sun lit lovin', machine burning, travelling - total fucking anarchy. It's time to **mourn** for our moment. Over the last decade thousands of species have been wiped out of existence. Vast forests - charred stumps. Coral reefs bleached dead by warmed seas, Millions starved within the prison of civilization. Wild peoples massacred, enslaved and pauperized. It's time to **strategise** how to make a real impact on this apocalypse. Look seriously at our strengths and weaknesses and pull together to **resist**. The empire is powerful but the spring is growing. It's a challenge like no other, but with love, luck and hard resolve we can **transcend**.

Down With The Empire!

Part II:
The Four Tasks

Up With
The Spring!

What follows is a strategy piece on social revolution and ecological defense, which we have reprinted from the pages of the UK anarchist journal Do or Die to distribute in the US. If you find this article to be of value, it is highly recommended that you find a full copy of issue (book) number ten, before they are sold out. See back inside cover for more information.

Part One, entitled "Recent Pre-History", while worth a read, we chose not to reprint due to its specific European focus. It can be found in *Do Or Die journal* #10 or online at:
<http://www.eco-action.org/dod/no10/empire-history.htm>

Please reproduce and distribute. We've sent out at least 1,500 copies and counting.

If it seems appropriate to your local situation, you may consider having a discussion group using this zine as a starting point.

webpage at anti-politics.net/distro/*

Do or Die no. 10 384 pages, fully illustrated throughout.

Contents include:

Down with the Empire! Up with the Spring!

After 10 years of radical ecological resistance in Britain, it's time to look back on our actions and forward to our future.

SHAC Attack!

Ideas on strategy and tactics from the hard hitting animal liberation campaign.

My Heroes Have Always Killed Cowboys!

An interview with a radical American Indian eco-activist Rod Coronado.

Reaping the Whirlwind

Action reports and suggestions from our war of sabotage against GM crops.

Fanning the Flames!

Arson around with the Earth Liberation Front in North America.

With United Hearts and Fighting Fists

News from radical struggles in Central and South America.

Our Bodies, Our Lives!

Anarcho-feminist health, healing and herbs.

Social Centres

Stable bases for radical politics or a compromise too far?

South Pacific Solidarity

Direct action in support of indigenous ecological and libertarian struggles in the Pacific.

Plunder on the Barbary Coast

The occupation of Western Sahara and the resistance to it.

Carry on Camping!

Up trees, down tunnels and in the face of developers with action camp based resistance.

Return to Paradise

What would really happen if London went back to nature? How would it look in years to come?

Size Isn't Everything!

Living with the wild and anarchic hunter/gatherer pygmies of the Congo basin rainforest.

Peat Alert!

Digger-diving and machine sabbing with the campaign to defend Britain's peat bogs.

Occupational Hazards

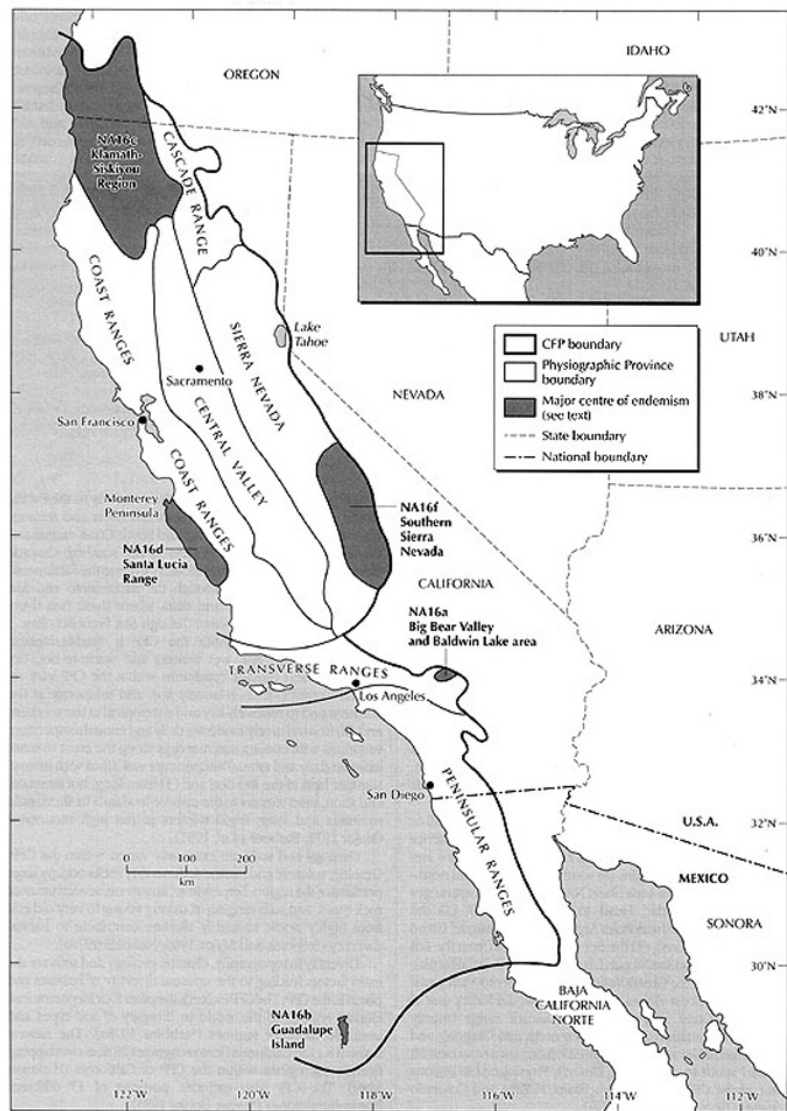

An interview about the reality of solidarity work in Palestine.

Ordering Information:

For each copy send £7.00 (UK), EUR 15.00 (Europe) or US\$ 15.00 (rest of the world). All prices include postage. Please send only well-hidden UK pounds, Euros or Dollars cash or UK cheques/postal orders made out to 'Do or Die'. For details of how to order multiple copies email them at: doordtp@yahoo.co.uk (they are really slow responding to emails) <http://eco-action.org/dod/>

If you have trouble ordering from the DOD collective, try Re-pressed [www.re-pressed.org.uk], AK Press UK [akuk.org] or contact the US Earth First Journal [earthfirstjournal.org] - they may still have copies available.

<http://www.biodiversityhotspots.org/>

Part Two: The Four Tasks

In Part One we looked at some of radical ecology's recent history; now it's time to stop looking back and start looking forward. I called Part One 'Recent Pre-History' because the past is prologue. An understanding of our own movement's evolution so far is essential when discussing in which direction(s) we want to evolve.

For if we are going to help catalyse a movement that can "confront, stop and eventually reverse the forces responsible for the destruction of the earth and its inhabitants," we are going to need good strategy.

We live in important times. This moment does not allow us much margin of error.

This is an attempt to solidify my ideas on our strategy and put them across in a digestible form. Though I am doing the typing and the mental filing, the ideas are by no means mine alone. Some are very common in our circles, in the last few years having reached the point of cross-group consensus. I will state them nonetheless as it's useful for those who've recently entered our arcane world, who may not know the subtext. They are also worth clarifying for those of us whose minds, filled with the subtext, become murkier every day. Many of the ideas are not in any way cross-group consensus. They are offered up and can be treated as delicacies or dogfood depending on your taste.

This is a strategy document written to promote discussion in Britain's radical ecological direct action movement. Much of it may be useful for people from other circles and countries. BUT it is NOT an attempt to build some overriding strategy for 'the emerging global resistance' or any similar abstraction. While it may be useful for readers in the global North, I reckon it's largely out of context in the Majority World. Even within Western Europe,

culture, terrains of struggle and movements vary a lot. It's worth reiterating the obvious. Strategy should be informed by the global context but primarily shaped by the local conditions.

A Small Editorial Note

'Part Two: The Four Tasks' was pre-published for the EFi Winter Moot in 2002 where 150 copies were given out free. I did this for two reasons. Firstly I wanted to get feedback with an aim to improvement, and secondly I feared that *DoD* No. 10 would not come out for months... or years. *DoD* No. 10 came out 17 months later and I got quite a lot of wise responses. Many of those thoughts from good warriors and friends have been incorporated in the re-written text printed here. In large part this project, despite its megalomaniacal undertones, was always a collective effort—a bringing together of many of the strands that bind us together as movements. The many helpful suggestions, criticisms and funny chats that resulted have made it all the more so.

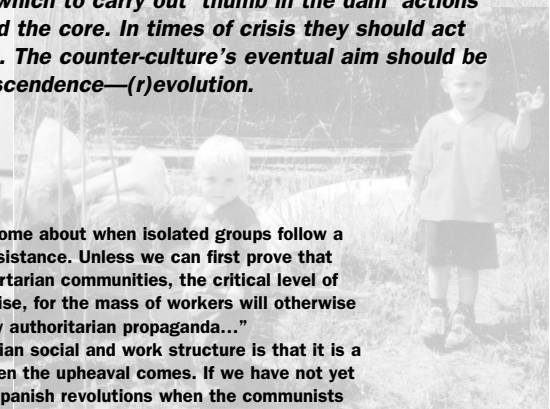

As a strategy document it is 'of its time' more than most writings, maybe. As you are reading this well over a year after it was written, action has moved on. One glaring example is the peat campaign, mentioned as an embryonic campaign, when in fact it has now succeeded in most of its original objectives. Some recommendations in this 'Part Two' have been taken up, others ignored. While some increased activity in some areas may seem—in hindsight—a result of this text, it would mostly be more true to see the four tasks as mirroring existing trends, not necessarily inspiring them. In some places I have updated the text to take consideration of this time lag, mostly though I have just left the text unchanged with the occasional [editorial intermission].

I

Growing Counter-Cultures

We need to catalyse living, loving, fighting counter-cultures that can sustain rebellion across generations. In both collective struggle and our everyday lives we must try to live our ecological and libertarian principles. Our counter-cultures must be glimmers of ecological anarchy—fertiliser for the growth of collective imagination. Fulfilling this task is what will enable the others to be fulfilled over the long haul. The counter-cultures must be bases from which to carry out ‘thumb in the dam’ actions and give support to rebellions beyond the core. In times of crisis they should act decisively against authoritarian groups. The counter-culture’s eventual aim should be total social transcendence—(r)evolution.

“[An anarchist society] can hardly come about when isolated groups follow a policy of resistance for the sake of resistance. Unless we can first prove that anarchism works through creating libertarian communities, the critical level of support that we need will never materialise, for the mass of workers will otherwise continue to be influenced by authoritarian propaganda...”

“[One] reason for developing a libertarian social and work structure is that it is a bulwark against authoritarian groups when the upheaval comes. If we have not yet learnt the lessons of the Russian and Spanish revolutions when the communists savagely attacked the freedom of anarchism, then we do not deserve to survive as a movement. We start at a severe disadvantage vis-à-vis our authoritarian ‘comrades’, and they will easily destroy us again unless the shoots of libertarianism are already pushing through the crumbling remains of the old society.”

—Stuart Christie, *Towards A Citizens Militia*.

This is true for our aim, objectives and form. In a sense it is the 'depth' of our victory which is at stake; as victory, given our aim, is not in question. For we know one thing: civilisation is temporary, an aberration. The class war is vicious—but there can be only one winner, the wild. We aim to shorten civilisations rule, to hamstring its tyranny, to lessen its damage. How far we succeed will in large part depend on which objectives we set and which forms we grow.

Of course our networks have not come out of nowhere, but have evolved within struggle. Many of what others see as our weaknesses, are our greatest strengths—with us thanks to a rejection of past mistakes. Our tactics are pretty direct, our immediate objectives usually achievable, our forms relatively autonomous.

As the corporations and states grow ever more powerful they know they can win any 'symmetrical conflict'. What the strategists of authority view with horror is the potential 'network power' of increasingly direct, decentralised, oppositional

movements. Their nightmare, our dream; but to reach our potential we must go far beyond ourselves.

Our strength is in our ability to take action and by doing so inspire others to take action. Not mass growth but cellular growth.

Rooting ourselves in the soil and the future, with keen strategy and an ever more tangible—but less visible—combative edge, we can get far stronger.

Our tribes, our counter-cultures will grow. We'll prepare for the fight. No prostituting ourselves to the media, we'll grow in the shadows, but strike when needed. New technologies will attempt to track us, we'll have to evolve to throw them off the scent. Some of the old techniques will have to be abandoned, others picked up. No faces. No names. No Compromise.

For over a decade many on this island have fought for the earth. Yet if we are going to truly defect we will have to struggle harder, think quicker and live wilder. The long trek back to the earth and each other is only beginning. In writing this I merely hope to aid our navigation. Part One showed where we came from. Part Two pointed a few routes to the future. The four tasks are huge; yet with sensible objective-led thinking, luck and hard will, they are perfectly realisable.

Imagine the machines, the pylons, the factories, the labs, the tanks—broken by you.

Imagine the wind, the sun, the beautiful moments—lived by you.

Down with the Empire! Up with the Spring!

"Whatever you can do, or dream you can—begin it. Boldness has genius, power and magic in it. Begin it now."
—Goethe

Map Reading in the Social Desert

Things are going to shit. They have been for a long while (10,000 years) but now it's getting really serious. Social solidarity is imploding and ecological systems are being ravaged as never before. What is needed is an entire change of direction for global human society. We need to find each other and together find our way back to nature.

We must totally dismantle the technological web of slavery and dependence that we have been born into. For the earth's remaining forests to stay up, the world's factories have to come down. To do this we will have to take on the most murderous ruling classes ever to disgrace the earth.

Of course, within the realm of contemporary politics, these solutions are not only unrealistic, but also unintelligible. That hardly matters. The biological meltdown is fast making the logic of industrial society irrelevant.

Reformist manoeuvres in this context resemble rearranging deck chairs on the Titanic. Global ecological and libertarian revolution, though incredibly unlikely, is a far more realistic strategy for defeating apocalypse and global slavery than recycling or voting for the Socialist Alliance.

A consensus in plenary at the 1997 EF! Gathering was that 'the movement' saw itself as an ecological revolutionary network.¹ This is a considerable change from the past radical ecological view that sees no hope for positive social change this side of industrial collapse.

So, if we set ourselves the task of advancing (r)evolution here in the core, how are we going to go about it? We are talking vast change here. Lefties just want to change the rules of the game leaving hierarchy, ideology and industry intact. We want to stop the game and start living. While they want to build workers power (power for lefty ex-students mostly) we want to destroy power and abolish work. This is a massive (though not a mass²) undertaking.

The mythical Revolution is not something that will just happen suddenly one day after we've polished some ideology long enough. (R)evolution is a process of individuals and collectives reclaiming what has been taken from us, rediscovering our power and creativity together. Sometimes gradually, sometimes in huge leaps during times of greater struggle.

Expand the Cultural Oases

"If we are to actually change things then there are some things we have to do: We have to build our own economic, justice and social systems. We have to do this all the while maintaining an equal emphasis towards destroying the existing culture and its fucked up systems"—Making Punk A Threat Again³

(R)evolution is about practical change in everyday life, class consciousness, solidarity, love and imagination.

(R)evolution is the evolutionary process of the creation of new worlds.

Ecological direct action could be just an exciting holiday of autonomy between leaving school and entering the world of work and parenting. If that's all it ends up being, then it has still given me and thousands of others some of the most beautiful, exhilarating and just plain weird moments in our lives.

However if we really want to kick this system in and grow a new world we have got to build a multigenerational culture that can sustain us for the long haul.

In growing ecological libertarian counter-cultures it is worth looking at past experiences of anarchist (r)evolution. Probably the best example in the West remains that of the historical Spanish anarchist movement.

The Spanish Anarchist Counter-Society

Us anarchists have a tendency to fetishise Spain 1936. In the non-insurrectionary times that we live, looking back to a 'golden age of anarchism' can seriously get in the way of analysing and struggling in the here and now. We are a long way off from the cataclysm and clashes of the Spanish civil war. However there is a lot to learn from the Spanish experience—less in the trenches of Aragon and more in the movement that gave them birth.

A simplistic view sees the Spanish revolution as starting in 1936 and ending with Franco's victory. In fact the (r)evolution had started decades before. Franco's attempted *coup d'état* and the ensuing civil war was the rich's (eventually successful) attempt to stall the growth of a culture that was reaching transcendent levels in many parts of Spain. Increasingly class conscious and combative workers organising in (largely) anarchist unions were immersed in a multigenerational culture which not only opposed, but replaced, much of Spain's state/church backed infrastructure; they were maturing into a movement that given a few more years, would have been almost impossible to destroy. In learning about the movement that Franco had to unleash a sea of blood to wash away we can see in part what needs to be done in our own times.

In his brilliant book about the pre-civil war anarchist movement Murray Bookchin has this to say:

"The Spanish anarchists left behind them a tangible reality that has considerable relevance for social radicalism today. Their movements 'heroic years' 1868-1936 were marked by a fascinating process of experimentation... [They] had evolved an astonishingly well organised subculture within Spanish society that fostered enormous freedom of action..."⁴

"What these Spanish anarchists aimed for, in effect, was a 'counter-society' to the old one. It is easy to mistake this for an 'alternate society', one that would co-exist with capitalism as an enclave of purity and freedom, however, nothing could be further from the truth. The Spanish anarchists expressly rejected the concept of an 'alternate society' with its hope of peaceful reconstruction and its privileged position in a world of general misery... Since social or personal freedom could not be acquired within the established order, they viewed a 'countersociety' as terrain in which to remake themselves into revolutionaries and remove their interests from any stake in bourgeois society... The bureaucracy, state, and church were the anarchists mortal enemies; any voluntary dealings with these institutions were to be avoided. Children were sent to libertarian or union schools."

"Wherever the [anarchist movement] had a substantial following it established *Centro Obreros*, which functioned not merely as union headquarters but as cultural centres. Depending upon its resources, the *Centro Obrero* might provide literature, books, classes, and meeting halls for discussion on a wide variety of subjects. This institution exercised a profound influence on the personal life of the worker who belonged to anarchist influenced unions... Ricardo Mella recalls Seville "with its enormous *Centro Obrero*, capable of holding thousands of people..."⁵

"Far more important than the episodic revolutionary uprisings, individual atentados [assassination of bosses or bosses men], or the daring escapes of small circles of comrades was the ability of the Spanish anarchists to patiently knit together highly independent groups (united by 'social conviviality' as well as by social views) into sizeable, coherent organisations, to coordinate them into effective social forces when crises emerged, and to develop an informed mode of spontaneity that fuelled the most valuable traits of group discipline with personal initiative."

"Out of this process emerged an organic community and a sense of mutual aid unequalled by any workers movement of that era."⁶

We are in a very different situation today and we are quite different people. The Spanish counter-culture was an expression of a transitional class captivated by an ideal that reflected its rural communal past and its harrowing social present.⁷ Yet we should take inspiration and practical guidance from their example.

In Britain a similar—but significantly different—working-class culture of mutual aid grew in nineteenth-century industrial communities. This culture sought to resist the intrusions of an industrial system into every aspect of people's lives and was the domestic flipside of defensive workplace struggles.

People endeavoured to mitigate for each other visitations of sickness, the death of children, the perishing of women in childbirth and a continuing inadequacy of basic resources. Much of this was the work of women, and was possible thorough networks of kinship and neighbourhood, as well as the associations in the workplace, through trade unions, co-operative societies, burial clubs and friendly societies.

Many radicals saw in this lived working class solidarity culture an embryo of a non-capitalist society, but thanks to industry and ideology it never embraced libertarian insurrectionary fervour like its Spanish relative; in fact, the opposite. Despite—or perhaps because of—the monumental mistakes made, we can learn a lot from the still warm corpse of the British labour movement.

Conclusion: Fires in the Night

I hope the conclusion to this pre-history and future strategy will not be written in words—but in action.

I went to a funeral. An ending, but it felt like a beginning. Old Mick was a veteran squatter, rebel and thief. His most successful heist was the reclaiming of his life from those bosses and jailers who think they own us. For decades he lived in the gaps. No one made him into a wageslave. No dropout, he fought. He was no saint, but if ever there was a temporary autonomous zone, Mick was it.

His funeral was one of the best 'actions' I have ever been on. Mick wanted to burn in Lyminge Forest, a large part of which was saved from destruction by direct action. Funeral pyres are illegal, death rights have to be sanctioned by the state. Mick wasn't going to take that, neither were his mates.

Thanks to a snitch the cops had got wind of the plan and a decoy was arranged to throw them off the scent. Meet up points were organised, phones rung. From all over the country vehicles arrived at the secret destination, appropriately marked 'Covert Woods' on the OS map. Over a hundred were gathered. Ten foot the pyre of 'stolen' wood rose, Mick's coffin astride. Night came. Fireworks shot into the sky. Crackling fire, we saw Mick's bones burn, back to the earth. For hours he burned. Some were lairy, some were silent. All of us knew that despite the petty daily bother, we were tribe and on the pyre was one of our elders.

Away from the roads, fearful in the dark—authority crept. The cops knew they had no power here. In the woods, a short confrontation. We were many, they were few. Behind our line—a fire. They

listed their petty rules. Illegal gathering. Illegal land occupation. Not to mention illegal funeral. But they could do nothing. Just then a track on the sound system announced with base certainty:

"The day belongs to The Man, but we *shall* control the night."

Be the Spark

When we step out of legality, when we are masked by the night, when we become the earth, we are unconquerable.

These moments of collective power, of togetherness and tribe, are not limited to those times we mass together. In the dark in different places, different times, our sparks join together as one fire. Many of us will never meet each other; all the better, we'll still be one—but those who want to extinguish our flames will find it all the more difficult.

Sun Tzu counselled that even under attack an enemy will only fall through its own mistakes and weakness. The key to victory is not so much to defeat one's enemy, instead it is to make oneself undefeatable.

these are aimed primarily at the domestic group's own constituency and may be more of use to them than to the foreign group whose member they are hosting. This can waste time the guest could more constructively spend on studying and organising in their own communities interest. However the above mentioned activities can be very useful IF they build solidarity actions here and other forms of direct aid. If not, the relationship can descend to one of the foreign guest giving a bit of Third World political entertainment to the Western radicals.

- 4) In fact the Indonesian state has used classic divide and rule strategy by using ethnically Papuan Indonesian soldiers to suppress revolt in East Timor and ethnically Timorese Indonesian soldiers to suppress revolt in West Papua.
- 5) A lot can be learned from this action. See the article 'Sabbing Shell' in *Do or Die*, No.8, p.125
- 6) The struggle of the Vietnamese against America was unbelievably heroic, from which many lessons can be learned, but it should be underlined that Ho Chi Minh's regime was an authoritarian state that mercilessly crushed all opposition. Our enemy's enemy is not our friend!
- 7) See *Pacifism as Pathology* by Ward Churchill, ISBN 18 940370 73, p.79. A brilliant "intervention into the delusion, aroma of racism, and sense of privilege which mark the covert self-defeatism of mainstream dissident politics." Speaking as an ex-pacifist, I'd highly recommend it!
- 8) 'A Strategy to Win' by Bill Ayers in *New Left Notes*, 12.9.1969.
- 9) The whole concept of 'armed struggle' is rather nebulous in a similar way to its dualistic opposite 'non-violence'. The fetishising of guns—basically just tools—is often carried out with equal abandon by those who advocate their use and those who vehemently oppose them. What is 'armed struggle'? Is the destruction of a digger by explosives (as was the case in one action by the Welsh Meblion Glydowr) an act of armed struggle?

If hand tools were used to the same effect (as say at Manchester Airport) is that not armed? Is tossing a mollié/petrol bomb at a cop in Genoa not armed struggle? Was the machine gunning of the Spanish Embassy by the Angry Brigade (in which no one was injured) armed struggle? If so, was the smashing up of the Nigerian Embassy with hammers not armed struggle? If the definition of armed struggle lies entirely on whether guns are used, the concept is of little use to us. We should not let tools define our activity, but our activity define which tools to use.

- 10) It is not just in the realm of actions, bombings and the like that Immigrant communities become 'an enemy within'. Over the last few years immigrants have been at the forefront of workplace struggle. The combination in some immigrant communities of radicalism and low wages has resulted in prolonged strikes such as at Hillingdon Hospital and JJ Foods. Inner city riots by young Blacks and Asians are another example. However it is not within the scope of this task section to discuss rebellions within the core (Task I) whoever they are carried out by.
- 11) 'Easton Cowboys Go West' in *Do or Die* No. 8, p.248
- 12) In the crackdown that followed the bombings of a Zionist office and the Israeli embassy many Palestinian activists were raided. Samar Alami and Jawd Botmeh were convicted of the attacks and given 20 years after which they face deportation to Israel. They maintain they have been framed. See 'The Israeli Embassy Bombing and the Secret State' in *Do or Die* No. 8, p.224
- 13) 'The New Luddite War' in *Do or Die*, No. 8, p.95
- 14) 'Being Busy' by Anonymous (SDEFI), in *On Fire: The Battle of Genoa and the Anti-capitalist Movement*, p.41
- 15) *The Spanish Anarchists: The Heroic Years* by Murray Bookchin, p.281
- 16) *This Side of Glory* by David Hilliard, ISBN 0316364215, p.27

Love's Labours Lost

In Britain—birth place of industry—the transitional class came much earlier than elsewhere. Defeated in a bitter class struggle Britain's poor had internalised industrial logic and embraced social democratic ideas even in the midst of continuing struggle. The working class (under significant influence from marxist socialists) created the hopelessly reformist Labour movement which in turn institutionalised the culture of working class mutual aid in the welfare state.

Thus whereas Spanish working class solidarity grew anarchist (r)evolution and the CNT, British working class solidarity produced the welfare state and the Labour Party. The post war 'triumph' of the labour movement and the founding of the welfare state was the near total subsumption of the working class by the state, not the other way round as lefties choose to believe.

The welfare state produced a security for capitalism which enabled it to set out on a period of expansion such as had not been seen since the exuberance of the early nineteenth century. An expansion which is bringing life to the brink.

The inter-generational culture of the British labour movement has now been destroyed over the last 20 years or so by Thatcherism/Neoliberalism. With the decimation of heavy industry and the restructuring of the economy most of the old strongholds of the British workers movement no longer exist—e.g. mining, shipbuilding, the docks and the nationalised industries.

Its continuation into the relatively recent past underlines what many libertarians have pointed out. Under the veneer of illusory command it is voluntary co-operation, mutual aid, nurturing, human solidarity and love that keeps society from imploding. Here though we are concerned with something grander than mere survival—living free.

30 Years of Temporary Counter-Cultures

Beyond the 'First World' significant counter-cultures are arising. Yet here in the capitalist core since the 'proletarian glory days' there have been no (r)evolutionary counter cultures on the kind of seismic scale that evolved in Spain. This is no surprise given that the 'class in transition' that defended the barricades of Paris, Barcelona and Kronstadt is largely no longer found in the core.

Since the '60s upheaval Britain has seen quite number of anarchist/ecological counter-cultures form then dissipate through inertia, state repression, or simply assimilation. These

autonomous cultures—squatting, feminism, travelling, punk, back to the land, ecological direct action camps, animal liberation, anarchism etc.—have all predominantly been youth movements operating in the heady (and vanishing) space of dole autonomy.

They have remained temporary because they have largely been generational; failing to either accommodate the changing needs of their ageing members or having any ability to involve younger generations. The one major exception has been travelling which has evolved into a multigenerational culture—there are now three generations of 'new travellers' on the road together. Unfortunately travellers have suffered more state repression than anyone—resulting in a mass exodus from Britain of tens of thousands.

The temporary nature of these counter-cultures—though not invalidating them—does significantly limit their scope from a (r)evolutionary perspective. The struggle then is to first join the dots, link up these generations of libertarians by creating multigenerational counter-cultures.

To a certain extent we have been going down this road for a few years. The inspiring actions of the '90s have brought many different age ranges together. Yet our radical ecological circles still remain very much 'Club18-30'. [I first wrote the previous sentence around four years ago and it may be truer now to say 'Club 21-33'! Rather worrying considering the next paragraph... ho hum.]

The next few years will show whether our movement will share the fate of the Trots (who, bar students, are mostly in their late 40s having been in their 20s in the '60/'70s upsurge)—an isolated political generation moving through time shrinking with every year.

The creation of multi-generational counter-cultures is essential simply from the perspective of our network survival.

Opening Up Space

More than anything else we need to open up space for (r)evolution to grow. Keeping ourselves undigested within the bowels of the system is going to be difficult. Later in Task II I will talk about biological meltdown and some of the steps we must take to combat it. Yet just as civilisation is destroying nature all over the globe so too it is haemorrhaging our internal nature. ("The best kept state secret is the misery of everyday life."—Raoul Vaneigem) This ever speeding emotional meltdown is resulting in an epidemic of depression, self-harm and violence. Without hope the oppressed will always turn their violence on themselves and each other. Ever more people in the core are turning to damaging pseudo-escapism; alcoholism, drug addiction and even religion are all on the rise.

It's Time to Defect!

At the beginning of the 21st century we all have to choose sides. Do we remain on the side of industrial civilisation or do we stand with struggling peoples in defence of our earth? Across the world the fight is on, fires are flickering, arrows flying. Look around you, see the targets. Pull up your mask, it's time to defect.

Above: Tahitian rioter besieges the international airport against French nuclear testing in the Pacific. Top Right: The 500 years of Mayan resistance lives on in the Mexican Zapatistas.

Bottom Right: Papuan stone age spears pierce the madness at the heart of modernity.

These panaceas only further poison society. Those without hope but also without the ability to fool themselves turn in larger numbers to an escapism that is in no way pseudo—suicide.

“Suicide is now the single biggest killer of men under 35... The rate—three times that of women of the same age—has nearly doubled since 1971. Working class men are at particular risk, with suicide rates four times those of men in professional occupations... The Samaritans believe the figures could be much worse as examination of road-traffic accidents involving just one driver suggests that some of them may well have been deliberate.”⁸ Although women—especially the young—lag behind men as ‘successful’ suicides, they are way ahead when it comes to attempts.

Speaking personally I have already lost too many friends and comrades to death, depression and drugs. Many of these were great warriors and brave, good people who shone during the ‘90s land struggles. But after these struggles and the culture it spawned ended, their shield from the world was gone. Soon after, so were many of them—if not in body then in spirit. I believe that for quite a few the temporary counter-culture of land struggle put off for years their NOT inevitable descent. It is from this that I take the belief that the growth of counter-cultures can go some way to re-instilling—and sustaining—hope and authentic human behaviour. Yet if we are to make these cultures (at least Semi-) Permanent Autonomous Zones then we need radical spaces and communities that will hold. To a large extent we have already started building (well, buying or breaking into mostly) the structures we need:

Communes: Housing co-ops, traveller sites, big shared houses, farms, squats, direct action camps and land projects.

Social Centres: Squats, members clubs, resource centres.

Our strength is in our ability to take action ourselves and by doing so inspire others to take action. To a large extent both the Land Struggle Period and the Global Resistance Period were catalysed initially by a very small number of people. Our network’s strategy has been one of empowering others to replicate our activity rather

South Downs Mass Trespass: Radical ramblers on a subversive stroll across stolen land. Illegal picnics liberate space for those otherwise stuck in the city. Kids play as plans are plotted over packed lunches.

than expand ourselves as such. It is both a duty and a pleasure to live our ecological and libertarian principles and if we do so as coherently and consistently as possible I believe it is quite infectious. Most of us, after all, got hooked on the laughs and commitment of others.

While counter-cultures should act as partial sanctuaries we should never forget the importance of defence through attack. In the words of the SPK (the ‘70s armed German psychological ‘self-help group’): “Civilisation: This sick society has made us sick. Let us strike a death blow at this sick society.”

Changing Change

Too often radicals decry others’ inability to face up to the desperate need for change. A few years back Jeremy Seabrook interviewed many radicals in an attempt to find the root of *their* failure to change society:

“We were becoming uneasy about the recurring theme that ‘people must change’. We began to wonder if the reason why the parties advocating radical change were so unsuccessful was because they were striking against the resistance of people who had changed, who had been compelled to change, too much. The experience of industrialisation had been driven and relentless change, and continues to be so. Even countries which pride themselves on having reached an advanced stage of development, of being post-industrial, of being ‘developed’, constantly require accelerating change from their privileged populations. So why should we expect that exhortations to change will be welcomed by those

the image that many people across the world have of life in the West. It is very valuable for them to see images of things they are familiar with—poor people fighting the police—taking place in the ‘rich’ West, leading them to see that the image they have been fed of the Western lifestyle is not all it’s cracked up to be and that maybe there are people like them in the West fighting for the same things they are fighting for. The riots in Genoa will send a

message of hope to people all over the world that right inside the belly of the beast there are thousands of people who are against the system and are prepared to risk their own life and liberty to fight it.”¹⁴

For a moment Genoa’s burning barricades effectively monkeywrenched the global image factory that aims to haemorrhage the self worth of peoples in the Majority World, to make more malleable fodder for the global economy.

The environment created by the ‘street’ at global conferences has also

helped open up cracks in empire. The collapse of the Seattle era WTO negotiations a good example. Another is the increased bargaining power the protest has given Majority World elites. They, like all of their global class are scum, but any action that opens up divisions in the global ruling class while bridging gaps between the global multitude is great.

Task Conclusion: There is No Rosy Picture

While I tend towards believing libertarian social (r)evolution is extremely unlikely within the core, I don’t have a particularly rosy picture for the Majority World either.

The combined factors of social dislocation, the spread of adolescent culture, the increasing depredation of the poor—especially of women, growing religious fundamentalism, bad health, agricultural crises, climate crises, the quickening internalisation of all into the global economy, the continuing survival of authoritarian ideologies—Marxism and nationalism in particular and most of all the unparalleled disparity in any capacity for force between the Core and its colonial multitudes; all these factors lead to a pretty horrific future for the majority of the worlds population.

Presently the oppressed throughout the world are hamstrung, how long this will remain one cannot say. However there is no point in being absolutist. Just because the arrival of *global freedom* has been (maybe terminally) delayed does

not mean that action is without purpose. By supporting ecological and libertarian rebellions and anti-enclosure struggles we aid the opening up of *local freedoms* and slow the devastation of the earth.★

Notes

- 1) The track *Assassin* by ADF concerns the ‘payback’ one Indian revolutionary gave Sir Michael O’Dwyer, ex-governor of the Punjab. O’Dwyer had presided over the massacre of unarmed peasants and workers in Amritsar in 1919. Nearly twenty years later Udham Singh shot him dead in London at a meeting of the East India Association. Singh was an electrician, trade unionist and in 1938 in Coventry the initiator of the first Indian Workers Association. The action both harrowed the English elite and lifted the spirit of many of his people. He was hung in Pentonville prison. The Indian Workers Association remains active today. For a good intro to Black resistance in Britain see *A Different Hunger* by A. Sivanandan, ISBN 0861043715
- 2) *The Zapatistas: A Rough Guide*, (Chiapas Link) ISBN 0904367992
- 3) Too often activists from other countries are pushed into reformist—and futile—trajectories by their liberal Western hosts. Indigenous groups especially are told to engage with the UN etc. While this idiosyncrasy is unlikely in our circles, other problems arise. Sometimes radical groups own normal ways of behaviour can lead them to push their guests into an endless round of solidarity talks, meetings, pamphlet and newsletter writing. Often

an inspiring show of genuine class solidarity. (As ridiculous as, say, refusing to take part in the Newbury Bypass protest because FoE is involved, with its pro-industrial stance.) However such unavoidable contradictions arise largely within the realm of advancing (r)evolution at home (Task I). Here we are concerned with supporting rebellion beyond the core (Task IV).

While the dynamics of (r)evolutionary struggle may decide our bedfellows for us, we can still decide who to actively support. Here I am talking about actions, money, resource sharing and

solidarity. Giving support to organisations here which stand in opposition to libertarian tendencies at home, (not to mention the interests of the people and planet!), is worse than nothing..

Marxist authoritarian ideologies which are dying off throughout the core retain real power outside it. Radical immigrant communities reflect their political culture of origin, yet within many of these communities there will be libertarian and anti-industrial groups and individuals. It is our responsibility to seek them out and however we can help them aid their people and land.

Luddite Attacks on Evolving Elite Technology

Just as we should oppose the militarised arms of capital based here so to we must slow the evolution of new elite technologies (weaponry for the class war) being developed here. One of the major aims of genetic engineering is to purposefully destroy the social fabric that keeps the land community together and fully incorporate the peasantry into the global cash economy. The threat is neutralised and becomes fuel for the machine's further expansion.

GM sabotage throughout the world is growing. Here in Britain we can say that we have hindered the evolution of this technology considerably.

As the Luddites of today, we know that, given the continuation of this society, halting—forever—the development of new technological weaponry might not be possible. Even if we don't succeed in stopping genetic engineering we have already slowed down the introduction of this technology. What this means in real terms is that we've

succeeded in delaying the further degradation of the lives of millions of people. We have delayed for months, maybe years the ecological destruction, hunger, despair and domestic abuse that social dislocation brings. If that is all we succeed in then we have achieved much.¹³

By slowing technologies of enclosure we are defending the ability of Majority World peasant communities to rebel. More will suffer as a result of these enclosures than ever do in overt global policing operations/ imperialist wars. Effective action against GM and other elite technologies are direct attacks on empire's power of expansion. Let's keep at it.

Smashing Up the Spectacle, Spectacularly!

The recent global resistance period has been hugely successful in building solidarity across borders and in supporting rebellions beyond the core. Radicals in every part of world have fought together on the PGA-called international days of action. This physical unity is immensely powerful. Beyond direct communication the conflict on the streets has itself an

important message, one that cannot be diluted by the forces of mediation.

"This is one important thing to remember about Genoa—because it was the G8 summit, all the world's media were there, and the news and the images of the rioting will have been carried back to almost every country in the world. The value of this, especially in much of the Third World is inestimable. Many people in other countries in the world imagine that everyone in the West lives a life of indolent luxury. Remember that Baywatch is the most popular TV programme in the world. This is

Children learn to grow their own on allotments—the people's land.

who have known little else for at least two centuries? In this context, the desire to conserve, to protect, to safeguard, to rescue, to resist, becomes the heart of a radical project."⁹

Counter (R)evolution

The elite pre-empt counter-cultural transcendence with civil war. To attempt to seriously change the world is to put realism in the attic, a worthy piece of Spring cleaning. Yet to embark on a project of change without taking heed of the likely reaction is not merely idiotic but terribly irresponsible.

"A truly revolutionary culture that is effective (demonstrating realistic, sincere designs aimed at the overthrow of established power) will be attacked by the built in automatic survival instincts of the established power complex creating a need to counter-poise the violence of power. Without the ability to organise a counterforce to neutralise the violence of established power, antithesis dies. We are not contending with fools."—George Jackson¹⁰

The rich will try to pre-empt and destroy by military means any movements of the multitude which have the potential to transcend and destroy power. In Spain, Hungary, Latin America, Indochina—social threats and state massacres.

Relatively peaceful social struggle and construction is only possible up to a point—the point at which it begins to seriously undermine elite power.

It is of course most likely that we will never get anywhere and therefore fail to bring the roof down on ourselves. However if we believe radical social change is at all possible than we must think and prepare for the reaction.

The leaflets for June 18th 1999 proclaimed that: "To work for delight and authentic festivity is

In the capitalist core, development is simply renamed progress and the ground is always moving from under our feet. Our 'thumb in the dam' defence of ecologies over the last decade has garnered vast levels of support. A similar but far more subtle process must be carried out to defend threatened positive social relationships.

We must first root ourselves in surviving communal and ecological practises, preserve them, extend them and link them with the emerging counter-culture.

In this way the base for (r)evolution is not merely 'new' relationships fostered by 'radicals' but age old radical (in the original meaning) relationships. One example is allotments and the connection to the land and sense of autonomy they breed—under constant threat from development.

The oppressed multitude needs to wrest control of change from the elite, becoming no longer change's subjects but its agents.

barely distinguishable from preparing for general insurrection". I'm a bit of a sucker for Situationist semantics but I have to say that pretty banners and samba bands do not armed militias make! Don't get me wrong, I like a good street party as much as the next twenty something; but let's call a spade a spade.

Situ slogans like this have been made common radical currency by the events of France 1968: rioting students in the Sorbonne, factory occupations, red and black flags in the sunshine.

France '68 is often used as justification for the idea that spontaneous revolution can succeed without the need for significant (r)evolutionary

One million march through Paris in support of De Gaulle's declaration of war on the movement and spirit of '68. Thousands chant for the well known anarchist Cohn Bendit to be sent to Dachau. He is a German Jew.

Troops storm Free Derry in Northern Ireland. The Bogside had been barricaded by the community to protect itself from unionist attacks and to create a functioning autonomous zone.

preparation. In fact the failure of France '68 proves the opposite.

From the boredom and misery of everyday life a momentous social upsurge swept across France without warning. President De Gaulle was freaked out and doubting the loyalty of the French army left French soil for the relative safety of troops stationed in Germany. Great! But just as the upsurge had appeared, suddenly so too it dissipated. Why?

There are a number of reasons—the Stalinist stranglehold on the unions chief among them. One simple factor, often ignored, was De Gaulle's appearance on national television to basically proclaim 'if you want civil war I'll give it to you'.¹¹ He insinuated he had the loyalty of a large part of the army while 'revolutionaries' could claim the loyalty of none. While this was not entirely true (action committees had been formed within camps of conscripted soldiers to organise break outs), it was mostly true. Trusted regiments were deployed around Paris and widely photographed.

A near million strong mass march of the forces of reaction took to the streets. Faced by this threat and sizing up the fight a large section of the working class, already disorganised by the Stalinists, understood its own weakness and abandoned the moment. Skirmishes at factories continued but De Gaulle's broadcast really was the turning point. Imagination is Power

but the power of imagination is not enough when confronted with the armed might of the state. What is needed is class strength—an armed people.

The failure of France in '68 was that coming so suddenly, the rebellion never really went beyond negative opposition to move to positive social growth and defence.

When offered civil war—the blood and the horror—many workers couldn't envision a future worth it. They also knew that they didn't have the class strength to get through a civil war. The lack of a decade by decade counter-culture left those who occupied the factories nothing tangible to defend

and expand and not enough weapons to do it with.

By resigning itself to the resumption of party politics instead of engaging in a bloody slug fest it would lose, the French working class was entirely logical. The failure of many radicals to size up fights—and as a result see the centrality of an armed class in (r)evolution—says more about their class background than anything else. Stuart Christie, long term British anarchist, founder of *Black Flag* magazine and attempted assassin of Franco, puts it well:

"One of the fundamental rules of guerrilla warfare is to spread the struggle to every piece of territory and to every facet of life. Unless the seeds of anarchist freedom have already been sown there, we are doomed to perish however good our military preparation might be."¹²

Any area declared free from state control will feel the might of government attack. As the graffiti illustrates, (r)evolution—the politics of the people—needs armed struggle to survive.

village that enable them to envision a different reality that they could create. They have vast potential collective power in the sheer numbers of young fellow shanty town/ghetto dwellers who share their class position. This is a potent revolutionary mix.

Many Majority World writers talk about this 'village in the city'. Within the slums and shanties, old village system of kinship and communal decision making often continue to aid survival in a hostile capitalist environment. It is from these collectivities that mass organised squatter movements arise such as the Movement of the Landless (MST) in Brazil which challenge the urban autocracy and the rural latifundi.

It is this tension that propelled the insurrectionary hordes in 1997 to bring down Suharto and systematically burn out the mansions of the Indonesian elite. It should come as no surprise to hear the voice of Lucy Parsons echoing from Haymarket through a hundred years—"We shall devastate the avenues where the wealthy live!" The class that gave birth to Parsons today spawns innumerable children throughout the 'developing world'.

I am NOT contending that rebellion and resistance do not and will not break out in the core capitalist countries. As long as society is based on class warfare 'normality' will be punctuated by episodes of rebellion and day to day opposition. Widespread insurrection and anarchist revolution are however another thing entirely. It is in the majority of the planet that the most seismic struggles are happening. For most of last century the resistance and transcendence of the oppressed 'Third World' global majority has faced two huge foes. The unity-in-opposition of two forms of capitalism: the Marxist 'national liberation' of native elites and the colonialism of Western elites has hamstrung the oppressed.

With the death of the USSR and the final 'withering away' of state socialism around the

world, a growing unity is developing between movements of those who live on the land and those who live in the shanties. Increasingly libertarian and ecological new generations are taking the fore. It is this unity which more than anything else could reap the whirlwind, shaking capitalism to its foundations and maybe even replacing it with a more authentic world.★

The Panthers—Militants of a Transitional Class

An interesting aside. Hugely influential to the radical wave that swept the west in the '60s and '70s was the Black Liberation struggle in America. Two examples stand above others. Germaine Greer says second wave feminism took its rallying standard—Women's Liberation—in reflection of the concurrent Black Liberation struggles, (see her book *The Whole Woman*). The rebirth of Republicanism in Northern Ireland arose largely out of the Civil Rights Movement, which took its name and in large part inspiration from American Blacks.

The Black Panther Party—itsself deeply inspired by struggles in the Majority World—is often seen as being entirely urban in origin. In contradiction, David Hilliard, ex-chairman of the Panthers, cites the land-based culture of the Deep South which many Panthers or their parents were brought up in as highly influential:

"When I think about the influences that inspired the spirit and work of the Black Panther Party—many of which are still not understood—this culture figures large among them. Many of the most important members of the party—people like John and Bobby Seale and Geronimo Pratt, Bobby Rush and Fred Hampton—were imbued with the moral and spiritual values of their parents; and the work that went into the party, our dignity as an independent people, the communal ideal and practise that informed our programs, all stem in part from the civilisation of which my mother and father were so representative a part."¹⁶

answer for. In a sickening twist the ‘What’s a few massacres between comrades’ tendency are often the first to condemn even the most minimal revolutionary violence in the West—‘It’s alright for niggers and chinks in far away countries to go killing each other in the cause of revolution but don’t throw rocks at white english policemen—they’re human too!’

On the other hand the Marxist dogma of the fully developed industrial working class as the ‘revolutionary subject’ has led many to ignore the vast scale of struggle going on in the majority of the world. This is highly ironic considering that the European ‘proletarian glory days’, starting with the French insurrection of 1848 and ending with the crushing of the Spanish Revolution, were pushed forward by a class that today can be found throughout the Majority World but only on the social margins in the West. For the second time in this pamphlet I’ll quote at length from Bookchin’s seminal work, *The Spanish Anarchists*:

“The June barricades of 1848 had in fact been manned not by an industrial proletariat ‘Disciplined, united, and organised by the process of capitalist production,’[Marx] but by craftsman, home-workers, nondescript labourers of every sort, porters, unemployed urban and rural poor, even tavern keepers, waiters, and prostitutes—in short, the flotsam and jetsam of French society... These very same elements, nearly a quarter of a century later, were to man the barricades of the Paris Commune. It was precisely the industrialisation of France after the Commune—and with this process, the emergence of a ‘full-grown’ hereditary proletariat ‘disciplined, united, organised by the process of capitalist production’—that finally was to silence the ‘crowing’ of the French ‘Red Cock’ that had summoned Europe to revolution during the nineteenth century. Indeed, much the same could be said of the Russian proletariat of 1917, so recently recruited from the countryside that it was anything but a ‘full-grown’ working class.”

“The great proletarian insurrections that seemed to lend such compelling support to the concept of proletarian socialism were fuelled primarily by social strata that lived within neither industrial nor village society but in the tense, almost electrifying force field of both. Proletarian socialism became a revolutionary force for nearly a century not because a well organised, consolidated, hereditary proletariat had emerged with the factory system but because of the very process of proletarianisation. Dispossessed rural people and craftsmen were being removed from disintegrating preindustrial way of life and plunged into standardised, dehumanising, and mechanical urban and industrial surroundings. Neither the village and small shop as such nor the factory as such predisposed them to the boldest kind of

social action; rather, they were moved by the disintegration of the former and the shock of the latter. Demoralised to the point of recklessness, déclassé in spirit and often in fact, they became the adherents of the Paris Commune, the Petrograd soviets, and the Barcelona CNT.”

“The very ‘half grown’ quality of the early proletariat, formerly peasants and craftsmen or perhaps a generation removed from such status, produced a volatility, intractability, and boldness that the industrial system and factory hierarchy were to attenuate in their descendants—the hereditary proletariat of the 1940s and 1950s, a class that knew no other world but the industrial one. For this class, no tension was to exist between town and country, the anomie of the city and the sense of shared responsibility of the small community, the standardised rhythms of the factory and the physiological rhythms of the land. The premises of the proletariat in this later era were formed around the validity of the factory as an arena of productive activity, the industrial hierarchy as a system of technical authority, and the union bureaucracy as a structure of class command. The era of proletarian socialism came to an end in a step-by-step process during which the ‘half grown,’ presumably ‘primitive’ proletariat became ‘full grown’, ‘mature’—in short, fully proletarianised.”¹⁵

Crammed into the growing Majority World metropolises, hundreds of millions today find themselves a part of this class in transition, caught in the electrifying force field between village and city. They face inhuman and desperate conditions as wage slaves within the city. They have memory of the communal experiences of the

Surplus Baggage

Despite our professed militancy and radicalism we still carry a lot of baggage from the political terrain many of us first got involved in—single issue campaigns. As has been pointed out elsewhere, our move into ‘revolutionary politics’ has often been carried out by pressure group methods.

Our responsibility to any (r)evolutionary process is *not to make revolution*, but to evolve counter-cultures that can *make revolutionaries*.

Ideally counter-cultures can have enough time to evolve, through struggle, to a point at which social transcendence, total (r)evolution, is possible. By such a time it would be able to field considerable armed class strength and possibly defeat elite attempts to drown it in bloody counter (r)evolution.

Of course history rarely leaves anyone alone with their plans and this is just such a case. Here lies the rub, in the words of a Canadian army military historian:

“Revolutions are not, in fact made by revolutionaries. The professional agitators, the terrible exiles of history have seldom succeeded in raising even the smallest revolutionary mob. The best they can hope for is to seize control of the course of the revolution once it has started. The thing itself is caused by the persistent stupidities and brutalities of government.”¹³

That ‘revolutionaries’ don’t make revolution is no bad thing considering those who executed most

of the last century’s revolutionary hopes were the very people who described themselves as revolutionaries—socialists like Lenin and Hitler. As libertarians a large part of ‘our job’ is to stop these murderous parasites from seizing control of the course of tidal waves of change. How far we are away from crises of this scale is unknowable but discussed in Task III—Preparing for Crises.

By strolling on to the terrain of revolution (at least theoretically) we are confronted by a plethora of leftist ideologies. Thankfully as libertarians we are inoculated against infection from some of most virulent—and stupid—authoritarian dogmas. For instance we have rightly rejected out of hand much of the (ridiculous) party building and fetishism of organisation which characterise the ‘revolutionary (HA!) left’ in particular and capitalism in general.

There is an opposing left tendency that disagrees with almost any activity aimed at preparing for the tumultuous events that punctuate history. In times of social crisis faith is put in the ‘revolutionary impulse of the proletariat’. One can sum up the theory of this tendency as ‘It’ll be alright on the night’. There is unfortunately little evidence from history that the working class—never mind anyone else—is intrinsically predisposed to *libertarian* or *ecological* revolution. Thousands of years of authoritarian socialisation favour the jackboot and this is the very reason why libertarian counter-cultures are so important.

Some Proposals

The practical work involved in this task is far more than all the others.

It means growing real friendships which can weather the storms of struggles and relationships.

It means creating our lives so parenting and activism neither conflict with each other or are seen as separate things.

It means growing food on our allotments and rebuilding the land community.

It means consolidating locally.

It means if forced into jobs continuing the struggle in the workplace.

It means solidarity between groups.

It means being vigilant against cultural assimilation, patriarchy and depression.

It means safe houses.

It means acting together informally in our shared interest. Your mates landlord won’t return her deposit—a short office visit by her mates should sort that out.

It means demolishing authoritarian socialists in general and Nazis and Stalinists in particular.

It means not allowing us to drift apart.¹⁴

It means training.

It means laughing together as we fight together.

In 2002 the 1 in 12 club in Bradford celebrated 20 years as a libertarian social centre. Formed out of a claimants' union in 1981, it hosts a bar, café and infoshop. Offshoots range from Mayday festivities to a Peasants' Collective. Today, with hundreds of members, it's part of a growing network of legal and illegal centres across Britain.

Really the list is too long to go through. I will not even attempt to catalogue what ingredients good counter-cultures needs—social evolution and the individual situation will do that.

The two primary divisions in this society that need to be overcome are our disconnection from each other and our disconnection from the land. Practically there are some very obvious things we can do now as an evolving counter-culture.

Reconnecting with each Other

1) Build a British Social Centre Network

Social centres—which place politics where they should be, in friendship—are the key to viable counter-cultures. Probably because of the post '70s travelling culture Britain is unusual in not developing a social centre network. Across Europe social centres are at the very heart of anarchist counter-cultures. (This is also true incidentally of Irish Republicanism and Basque separatism). This process has begun and from this one act of organisation a thousand acts of resistance will follow. [Since this was first published a London Social Centres Network has formed and plans are afoot for one nationwide.]

2) Prepare for Strike Support

Our circles, despite inhabiting a economically peripheral social position (casual labour, dole, single parenthood) have a far better record in the last 10 years in supporting strikes than the left. To quote a shop steward from the Liverpool Dockers: "others talk, these people do!" A small amount of thought can make our ability to use direct action to intervene in workplace struggles much easier. Solidarity among the poor—the very basis of counter-cultures and anarchy.

3) Resist Together, Train Together

While a (r)evolutionary culture can include everything from cabbage growing to hip-hop, without active resistance a culture will not hold. We need to be up against it to make sure both that the petty things don't split us and the big things bring us together. Living in a mundane world you

can know someone for years and not truly know them as you do after a day of struggle.

Acts of purposeful resistance build our collective strength but we shouldn't just rely on events but train to grow our power. *Run Faster*—go running with a mate. *Trash Better*—learn sabotage skills before you need them. *Find*

Direction—go orienteering at night. *Get Fitter*—give up smoking collectively. *Hit Harder*—spar with friends. Strength is infectious.

Reconnecting with the Land

1) Grow the Land Community

Allotments are available to us all thanks to Nineteenth Century arson, but hundreds of sites every year are being destroyed by developers. More direct action is needed to stop this haemorrhaging of an inheritance born of struggle. More work allotments in Britain than work in farming and it is only from this land community that any hope for ecological autonomy can grow. The experience of growing your own food is (r)evolutionary.

Allotments also offer a jump point for those committed to leaving the cities and towns. On these small patches we can learn many of the skills in miniature needed if we are to grow out of our dependency on the industrial. From farm communities in Cornwall to land projects in the Scottish Highlands many of our circles have gone 'back to the land' in the last decade. Many more will follow. The call of the soil cannot be drowned by the cacophony of traffic.¹⁵

***"In the final analysis, all revolutions are fought over the question of land."*—Malcolm X¹⁶**

2) Rewild Ourselves

Get out beyond the streetlights and join the stars. Hear the darkness and see the sounds of the night. Learn skills, light fires. Discover wild foods. Sit quietly in a wood and wait. Guide kids to the true joy of mud and spiders. Wear down the soles of your walking boots, harden the soles of your feet. Get naked in the sun and snow. Pack a heavy rucksack with everything you'll need for a weekend camping, then leave it on the bed and walk out the door. Nurture saplings, plant the

Peasants and the Transitional Class

Unsurprisingly, the majority of the resistance to the global empire arises where the majority of its subjects and slaves live—the hilariously named 'Third World'. To accept this is not to reject the reality of class struggle in the core capitalist countries but merely to accept the logic of maths and geography. The Third World is, after all, most of the world.

In the Majority World the global elite are faced with class enemies they have long since vanquished within the industrialised West—the peasantry and the transitional class. These two classes are the main human block to the elite's expansion and consolidation over the majority of the planet.

Nearly half of the world's population do not live in cities. Of these, hundreds of millions are hardly under the actual domination of capital at all. As peasants they retain relatively high levels of autonomy and have yet to be fully (or often even partially) enclosed by capital. For the actual domination of capital to expand that autonomy must be destroyed. They themselves and the land they live on must be commodified; their land turned

into 'resources' and they themselves into wage slaves.

In localities all over the Majority World the continuing class struggle between loggers, agribusiness, oil corporations, local land autocracies and the state on one side, and peasants and tribal people on the other is, in fact, the border war between the global economy and the land community. It is a border war that, despite heavy resistance from groups as diverse as farmers in India, river delta communities in Nigeria, the Zapatistas in Mexico and tribes in Papua, is largely being won by the wealthy. Of course people do not immediately submit to power and accept their position as wage slaves. Throughout the 'developing' world (a telling phrase) the new inhabitants of the cities fight back.

One would expect Western radicals to orientate themselves towards 'Third world' struggles according to their present class position, and the fact that our shared past is their shared present. Unfortunately many communists, liberals, greens and anarchists vision is still hazy, blurred by the misleading mythologies of Marxism. There sometimes seems to be an unbridgeable split between those who think that social change can only arise out of the core capitalist countries and those who believe it will be fought out in the 'Third

World'. This really is a false dichotomy and both sides take their ridiculous scripts from the Left.

On one hand 'Third Worldists' have supported all sorts of authoritarian murderous gangs and governments on stupid basis like 'the nationalism of the oppressed is different than the nationalism of the oppressor'. (It should be almost banal now to point to Israel's treatment of the Palestinians or Ethiopia's offensives against Eritrea as just two examples of the nationalism of the oppressed becoming the nationalism of the oppressor.) Anyone saying anything like this cannot in any way be an anarchist and at this historical juncture should just be the cause of mirth. Lenin's bizarrely inverted version of anti-imperialism has a lot to

have continued. In fact the PKK remains one of the largest left-wing organisations in Germany.

Another good example is the Palestinians. The 1970s saw Palestinian organisations (chiefly the PFLP) carrying out attacks on targets in the core related to their struggle. While the level of attacks in the West by Palestinians has decreased, there are still reasonably regular outbreaks. As I write two Palestinians are serving time for bombings in London in 1994.¹²

On the face of it there is a good argument for working with these communities, but the case of the Kurds throws up important questions which are widely applicable. The PKK and its various offshoots and rivals are largely Stalinist parties whose political aim is in total contradiction to liberty and ecology. This reality can result in serious problems—here as well as in Kurdistan.

A few years ago members of the London 5th of May Group (Turkish/Kurdish anarchist exiles) were threatened by a Kurdish Stalinist sect. Back in Turkey the same sect has murdered two anarchists, one on the streets and one in prison. Ironically the British wing of the same sect was

appealing for solidarity for the PKK prisoners in their struggle against control units.

Around the same time the flags of Turkish Stalinist parties were held aloft in Parliament Square on 'our' Mayday 2000. If they had been held up by white English people I am sure our circles would have forced them down. The emblems of authoritarian socialism are the tombstones of libertarians past, present and future. How would we feel if Turkish anarchists marched alongside the banners of a gang that had executed one of us?

'Anti-imperialist unity' despite its seeming attractions can be worse than vacuous. It can mean unifying with priesthoods of new imperialisms. A true opposition to Empire requires us to choose those communities and organisations we organise with carefully.

This does not mean we should not practically engage in struggle alongside groups we are bitterly opposed to. During the march for the Liverpool Dockers it would have been ridiculous for us not to be part of the demo because it contained a contingent of Kurdish Stalinists—who were there in

spring. Improvise shelters, get nifty with a knife. Don't go to work—fuck in forests.

3)Continue Ecological Land Struggles

In Britain our struggles over ecology and wildness are powerful theatres for the growth of ecological sensibility. In living on, for and in defence of the land, one forges an immensely strong connection. Fluorescent binned cops grappling with tree defenders brings out into the open the age old conflict. On one side the property/state axis, on the other wildness, diversity, freedom. By creating these situations of struggle, mythic discourse is shattered with a power no essay or clever turn of phrase will ever have. Unleashing these revelatory (r)evolutionary moments is at the heart of our action. With every broken illusion we take a step back from the abyss.¹⁷

Task Conclusion: Grow and Live

For new worlds of land, liberty and love there will be both kisses and gunfire.

Taking responsibility for our own lives and those around us is daunting. It's not just the cops, the bosses, the scabs and the poverty that keeps people working for the man. It's the terror of the blank page. We are schooled to be dependent on fictions and commands, not to believe in ourselves. Growing and defending new worlds is a daunting task, yet the alternative is far worse. An acceptance of a tide of void that consumes species and peoples while it daily drains us of dignity.

The aim of our counter-cultures should be total social transcendence—(r)evolution. That (r)evolution is extremely unlikely (there is no point pretending otherwise) does not fundamentally question the need for counter-cultural growth. Counter-cultures are not only new worlds for the future but barracks and sanctuaries for today.★

Notes

- 1) Simply wishing this doesn't make it a reality. It may be truer to say that we aspire to become ecological revolutionaries.
- 2) Civilisation needs us all to become increasingly isolated individuals that can only exist as part of a mass. Authoritarian 'revolutionaries' and reformists alike often talk of the need for a 'mass movement' to create change, yet libertarian change only happens in 'everyday life'. Check out the pamphlet: *Anti-Mass—Methods of Organising for Collectives*.

- 13) 'The Coup D'Etat' by Lt-Colonel DJ Goodspeed in the interesting, but slightly weird, *Civilian Resistance as a National Defence* edited by Adam Roberts (Pelican).
- 14) A good point from another DoD editor: "In some ways, I really don't like the extrapolation of the 'personal is political' that some of these proposals represent. Instead of all social relations being subsumed/made subordinate to capital, they are subsumed to the task of building the counter culture/revolution. Have you not considered that people drift apart because they realise that they simply don't like each other any more—and that it might be unhealthy to stay together for the sake of the revolution?"
- 15) In the cities isolation from the land can drive you mad, in the countryside isolation from other people can have the same affect. For this reason it is important that those moving onto the land do so collectively and/or stay in regular contact with those elsewhere. The take-over of land—legal or illegal—should be seen as an extension of the counter-culture not a flight from it. For more on allotment history, forest gardening and land struggle see 'Farmageddon: Confronting Industrial Agriculture', *Do or Die* No. 7, p. 40

- 17) "Or maybe a step closer to despair and the loony bin"—says another DoD editor.

11.9.2001

I will say little about 'S11'. I found out about the attacks on the Pentagon and the WTC from an excited kid leaving school, having spent most of the glorious sunny day in a different world picking beans on an allotment. As is obvious from bin Ladens' CIA history this was, to use Malcolm X's statement on the Kennedy assassination, America's chickens coming home to roost.

The world is class divided and filled to the brim with religious idiocy. As long as that remains the case, war and all its horrors will be visited on people everywhere. S11 was pretty horrific but the 4,000 + deaths are small fry compared to those put in the gas chambers by industry, pollution, enclosure etc. The hysterical reaction of many to the events—while understandable—seems rather sickening considering the lack of any similar response to the many thousands more deaths every day caused by profit and the dominant hierarchy.

S11 has many ramifications but I will mention only a few. Firstly, radical US prisoners are getting a harder time of it. They need our support. Secondly, I stated above that militants from the Majority World will increase attacks in the core—thanks to the changing nature of global society. Rome was sacked by armies that invaded on roads Rome itself had built. When I wrote this section I wasn't envisioning anything as dramatic as S11. The fact that it was carried out by religious nuts isn't really surprising considering

what I say later in 'There is No Rosy Picture'. S11 was the first attack by Majority World militants of its scale, and it is only the first. All over the world in shanty-towns and slums teenagers with no future will be thinking about what can be done with a few box-cutters—not even knives for fuck sake! One of the Los Alamos Lab team which exploded the first nuclear bomb, said that there was nothing hidden which had stopped others from doing what they did. The secret was that it could be done. S11 showed what can be done. The ring side slug fest of leviathans slaves has only begun.

During the Second World War the RAF's firestorm massacre of thousands of civilian Germans at Dresden was justified by saying that those who worked in the factories of the Nazi war machine, were military targets as much as those who fought on the field. During the post war anti-imperialist wave Algerian guerrillas rejected this logic when they rejected a plan to crash a hijacked plane into Paris. The horrors of the unity-in-opposition of 50 years of communism and capitalism has resulted now in Arab 'anti-imperialists', lost in the Koran, accepting the logic of Bomber Harris.

For a thought provoking read check out *Some People Push Back: On the Justice of Roosting Chickens* by American Indian Movement activist Ward Churchill.

**No War Between Nations.
No Peace Between Classes.**

II

Putting Our Thumb in the Dam

Just as counter-cultures must open up space for (r)evolution to grow we must also open up time. The life support systems of the earth are under unprecedented attack. Biological meltdown is accelerating. (R)evolution takes decades to mature. Unless force is used on the margins of the global society to protect the most important biological areas we may simply not have enough time. The last tribal examples of anarchy, from whom we can learn a lot, could be wiped out within decades if not militantly defended. 'Thumb in the Dam' struggles aim to protect ecological diversity understanding that this civilisation WILL be terminated, by either the unlikely possibility of global (r)evolution or the certainty of industrial collapse.

"What would the world be, once bereft,
Of wet and of wilderness? Let them be left,
O let them be left, wildness and wet;
Long live the weeds and the wilderness yet!"
—Gerard Manley Hopkins, *Inversnaid*.

"Our job is to save the evolutionary building blocks and to make sure there are grizzly bears and great blue whales and rainforests and redwoods somewhere, so that in the final thrashing of the industrial monster everything else that's good on this planet isn't destroyed."
—Dave Foreman, Earth First! co-founder.

Any really effective action might bring down a level of repression that our circles could not survive. Yet if serious action is not taken *solely so as to avoid personal hardship* (rather than for any *real* strategic reason) we are guilty of 'posing as progressives' while accommodating ourselves to power. It is worth here repeating the well known quote by Black Panther Assata Shakur. Back in 1984 she said:

"It is the obligation of every person who claims to oppose oppression to resist the oppressor by every means at his or her disposal. Not to engage in physical resistance, armed resistance to oppression, is to serve the interests of the oppressor; no more, no less. There are no exceptions to the rule, no easy out..."

In fact the question is not just one concerning 'armed resistance'.⁹ If 'non-violent' action is *actually effective* (not merely symbolic) it too results in severe repression. At present a number of Animal Liberationists are in prison for waves of fire bombings which the ALF press office would correctly describe as 'non-violent'. The repression that has followed each wave of action has been considerable. One could guarantee at least the same level of repression if ecological circles ever

took the road of some solidarity movements in the past.

The guerrilla movements were crushed by state repression and internal dynamics. Jail and death was the fate of many of our forbears. *I for one have no desire to join them but it is important that we look at their stories and think seriously about these issues.* Sadly, it has to be said that in many ways the urban-guerrillas never fully escaped the symbolic political terrain they had evolved in. Looking at their targets one sees again and again globally unimportant army bases, recruiting offices and the like. Despite being very direct, their actions, with some notable exceptions, were rarely very targeted. Most of the armed action was relatively minor in scale and of course armies are designed to sustain and survive mass death and destruction. Attacks on key armaments factories for instance would have had considerably more on-the-ground effect in Vietnam.

There are serious questions here about strategy, racism, symbolism, violence, the nature of sacrifice and our position in the global slavery pyramid. These ideas have to be thought through, all the time rejecting both a cult of violence and an internalisation of passivity.

Immigrant Communities Within 'Rome'

The Terrorism Act which passed into law in 2000 was seen by many as part of a clampdown on the 'direct action scene'. It is likely that some of its powers will to be used against us in the future, but as targets of the new legislation we are peripheral. The main targets are undeniably Irish Republicans and immigrant communities. The newly proscribed organisations are almost all British wings of Majority World organisations—mostly Communists or Islamists. This should come as no surprise—states have always worried about immigrant communities becoming 'enemies within'.¹⁰

Until last century the individuals and institutions of Western power were largely out of reach to the far off peoples they massacred. With the growth of international travel and increased immigration into the core capitalist countries this is no longer the case. [This section was written before the attacks on the Pentagon and the WTC—I deal with these in the box opposite.] Some of these organisations have been sending fighters to

Majority World battles and carrying out attacks in the core. We may have sent footballers to Chiapas¹¹ but Islamists have been sending guerrillas to Yemen. No surprise who got proscribed.

Whether Islamic or Communist we should have no illusions about the authoritarian nature of many of these groups. It is hardly likely that anarcho-atheist types are likely to make common cause with religious nuts of any persuasion but there are often calls to build 'anti-imperialist unity' with immigrant community commies.

The best example of a left-wing immigrant community is that of the Kurds. Kurdish groups here in Britain retain direct communication with their respective organisations both at home and throughout Europe. The demonstrations, occupations and immolations in London—and throughout the Kurdish diaspora—that followed the trial of the leader of the Kurdish Workers Party (PKK) were highly co-ordinated. The Kurds have been very active in supporting struggles in Britain such as the Liverpool Dockers—taking part in marches and raising money. They have turned up en masse at two arms trade blockades and were some of the most up-for-it people on Mayday 2000 in London. In Germany there is a much larger Kurdish population and though the PKK has been proscribed for years, attacks on Turkish interests

the streets of London. What would you do if you could be on the Kings Road in London rather than a jungle in the Pacific awaiting death? Hold a banner? Shout at a few people? Occupy an office?

If such a situation arose again, and it will, what will be the reaction of our circles? While British mercenaries on PNG were preparing to decimate Bougainville, Greek and Italian troops were crushing the Albanian insurrection. It is likely that Western European troops will be increasingly used to counter revolutions in the Majority World. *Direct action must be used to hinder the functioning of the militarised arms of capital when they reach out to destroy libertarian and ecological rebellions.* We are where they are based. We are where the guns are produced. Sited as we are in the heart of the beast small amounts of intense action can have a disproportionate affect.

It's worth taking a quick look back at what attempts at solidarity were made by previous generations of capitalist core radicals.

In the 1960s and 70s western solidarity with the Vietnamese struggle⁶ took many forms, most of which was pretty useless. As an American Indian Movement activist put it: 'holding candlelit vigils and walking down the street does not constitute "acts of solidarity" with those engaged in armed struggle.'⁷ However there were rare actions with real effects. The German left wing urban-guerrilla group, the Red Army Faction, attacked a whole array of US army targets. One of its most successful actions was a major attack on a key US base from which the laying of mines in Vietnam was organised. Across the water the Weather Underground bombed the Air Force wing of the Pentagon. The consequent flooding crashed the central computer of the US military's global communication system. These two acts had a real effect. By 'bringing the war home' they directly joined the struggle in the jungles of Vietnam and contributed to the crippling of US military morale. That both actions were born out of a 'politics of despair', (arising from the orchestrated apocalypse in Vietnam and the self pacifying, racist and delusional character of 'mother country radicals'), did not diminish their utility in supporting rebellion beyond the core, merely the ability of the organisations carrying them out to survive.

From the perspective of domestic (r)evolution most of the '60-'70s European guerrilla movements were counterproductive. Irish Republicanism and Basque Separatism (Europe's longest running armed struggles) were both expressions of communities in rebellion. The European New Left guerrillas on the other hand, (with the exception of Italy), were largely the project of middle class student radicals with little social 'base'. Often seeing themselves as vanguards who would lead the working class to victory, they

became self destructive cliques that probably even regressed the building of (r)evolution in their countries.

This does not however detract from the fact that some of things they did were extremely effective 'fourth column operations' carried out in time of war. Given the absence of generalised struggle in the capitalist core these radicals were given a choice. They effectively decided to defect. While other New Left formations immersed themselves in (largely futile) domestic (r)evolutionary activity (such as supporting unions) the Weather Underground concentrated on the 'global struggle'. Their (amazingly arrogant) attitude to the rest of their country was summed up well when they reacted to an opposing left wing groups slogan 'Serve the People'. Weather replied that they would "fight the people if to do so would further the international revolution."⁸

The question is not whether 'vanguard adventurism' is a way of rousing domestic (r)evolution (it isn't) but whether the potential gains to revolutions elsewhere outweigh the negative effect it has on domestic social evolution.

To a certain extent a pretty stupid question, but a real one posed by the contradictions inherent in the 'global struggle'. It all depends how one weighs up at this point in time (r)evolutionary possibilities in the core—and political activists relationship to such possibilities if they exist—and (r)evolutionary/anti-enclosure struggles in the Majority World.

If we came to the conclusion that as a movement we were going nowhere yet were either in a position to: a) significantly aid an allied struggle with a better chance of success, or b) significantly decrease the level of violence visited on friends being drowned in blood; what would we do?

Bomb damage to the officers' mess of the US Army HQ, Frankfurt 1972: "West Germany will no longer be a safe hinterland for the strategists of extermination in Vietnam."—RAF

Here Come the End Days

The aim of this piece is to help prioritise and direct our action and organising. However our absolute action priorities are not left to us to determine. They have been decided for us by the point in history in which we live. For this reason I have made this task section considerably longer than the others.

Industrial Capitalism has continued civilisation's age-old attack on the wild and free—resulting in unparalleled biological and cultural meltdown. The decimation of wild peoples (cultural meltdown) and the devastation of ecological diversity (biological meltdown) are now reaching truly apocalyptic proportions.

Biological Meltdown

"Indeed, all the indications are that we are standing at the opening phase of a mass extinction event that will be comparable in scale to the five great extinction episodes that have taken place in the history of life on earth, the most recent being the loss of the dinosaurs some 65 million years ago. Impending extinction rates are at least four orders of magnitude than is found in the fossil record. That means in the order of 10,000 times greater, a frightening prospect to say the least. If

allowed to continue the current extinction episode, could well eliminate between a third and two thirds of all species... [within this] century."¹

One third to two thirds of all species on earth—GONE! Stop a while, attempt to conceptualise the magnitude of the moment.

Nothing in the history of humankind has prepared us for this appalling event, but OUR generation will probably witness the disappearance of a third to one half of the earth's rich and subtle forms of life, which have been evolving for billions of years. In the early 1990s Michael Soule, founder of the Society for Conservation Biology, made this chilling assessment of the status of the earth's biosphere:

"For the first time in hundreds of million of years significant evolutionary change in most higher organisms is coming to a screeching halt... Vertebrate evolution may be at an end."² Soule is

saying that humanity's disruption of the environment has been so systematic and profound that it has halted the same natural processes that have brought everything we know into existence, including our very bodies and minds.

Cultural Meltdown

It is tempting when facing this scale of doom to think of humanity as an intrinsically ecocidal organism. A pox on the earth. This however lets us and our society—city culture—off the hook.

Numerous cultures have developed a sustainable and harmonious relationship with their surroundings: the Mbuti, the Penan, the !Kung, to name but a few. These societies chose not to dominate nature. In the larger history of humankind, they are the norm and we are the exception.

On civilisation's periphery, some of these wild peoples live on. Their very existence is a serious threat to city culture; simply in the fact that they show that there is a reality outside our world. Defending their autonomy and the land of which they are a part, they are the best protectors of some of the earth's wildest places.

Just as wild nature is being denuded and domesticated, so too is wild humanity. This century will probably be the last for many cultures ages old. Civilisation aims to wipe out their other worlds. Men of money and men of god conspire. If these tribes are wiped out by our culture, it will be the first time in millions of years that no human communities have lived in harmony with nature.

Guns, gold, god and diseases could make Homo Sapiens extinct in our lifetime. For when the last gatherer-hunters are hunted down, all that will be left of humanity will be in the entrails of Leviathan—having the potential for life but unliving.

'Land, the mother earth from which we are born and to which we die, on whom our lives depend, through which our spiritual ways remain intact. To impose changes on this ancient order would serve to destroy our dignity and identity as Indigenous people. Without the land, the peoples are lost. Without the Indigenous peoples the land is lost.'—Declaration of Indigenous Peoples, 1987

A Critical Moment

It is in this context that we must see ourselves. Not simply as rebels against empire, like so many before us, but rebels at the most critical moment in human history.

Our generation will likely see the decimation of remaining ecological/anarchic cultures and the haemorrhaging of the earth's life support systems. As I outlined in Task I reformist strategies are irrelevant but (r)evolution is not only unlikely but also takes time. This has often been acknowledged by radicals in the past. Emma Goldman in her last

years wrote that she believed anarchy was too huge an idea for her age to move to in one step. She looked to future generations, seeing in them hope for the spring. Her feelings echo that of many over the aeons. Looking back, an example arises from the ashes and war cries of arson and insurrection in early 19th century England. One rebel anthem sung with gusto at the time resonates.

"A hundred years, a thousand years,
We're marching on the road.
The going isn't easy yet,
We've got a heavy load.
The way is blind with blood and sweat,
And death sings in our ears.
But time is marching on our side.
We will defeat the years."³

They fought, but like many before and after, failed to get to the promised land. Yet they took solace in believing their path was right and others would follow, reaching where they had not. Their belief in an almost endless future of possibility, in the unswerving progressive march of humanity through and with time gave hope to the weary.

We no longer have that luxury.

It is in this context that we must see ourselves. Not simply as rebels against empire, like so many before us, but rebels at the most critical moment in human history.

Today time is not marching on our side, but against us. We must fight all the faster. We cannot pass the gauntlet of defending the wild to unborn generations. It is that wildness and those unborn generations that are in peril today. What we do in our lives, in this moment, is of utmost importance. For no other generation has the weight of the future rested so heavily on the present.

Given the urgency, the pain, the horror and the magnitude of the unfolding catastrophe, the questions what to do and where to start are daunting ones. Thankfully the way has been charted in part by the last 25 years of radical ecological action. 'Thumb in the Dam' struggles have been at the very centre of our activity.

How can one best defend wild areas and cultures? In the absence of significant (r)evolution the answer lies in a combination of conservation, direct action and the strengthening of ecological cultures. Groups such as the Wildlife Trusts (in Britain) and Conservation International (globally) have adopted land purchase as their main tactic.

A BP employee tries to prevent the unfurling of a banner at its London HQ during an action against BP's funding of Colombian death squads in December 1996.

Occasionally we would close down a petrol station for a few hours or even half a day, sometimes co-ordinated across the country, but was it really having any effect? The surprising answer is yes!

After the Nigerian state/Shell executed Ken SaroWiwa, 21 of his 'co-conspirators' lay in jail awaiting a similar fate. Against expectation after months of suffering, the prisoners were released. Once outside the bars they wrote a letter to their supporters in Britain. The letter thanked everyone for their support and specifically mentioned the petrol station blockades as a major factor in their survival.

The Shell campaign built up a head of steam over years and garnered significant mainstream support after Ken was killed (little of which turned into any meaningful aid). It was exceptional but not thankfully an absolute exception.

Most of the time the power of our actions comes from constancy, confronting targets over and over again. However in times of foreign crisis lone acts can be useful. A recent funny example was when 'Those Pesky Kids' invaded the Argentine embassy pulling down its flag and hoisting up the black and red. It will not make much difference on the Argentina streets but its image has travelled the world through papers

and the web. Argentinian anachos were really jollied up, their spirits raised.

Other solidarity actions, notably those done for the Zapatistas, have succeeded to differing levels in raising the spirits, harassing the attackers and exposing the struggles. Over the last decade I think our solidarity actions, given our numbers, have been remarkably successful in achieving these objectives. Sometimes, though, it could be said that we are using Majority World struggles as scripts with which we can act out our own politics.

The Clouds are Gathering?

The type of solidarity actions described above should continue but let's face it—they rarely hinder the system, but symbolically oppose it. Symbolism has a lot of power—but not as much as force.

In 1997 a British/South African mercenary outfit acting for British mining giant RTZ was planning, from their London offices on the Kings Road, to burn up the rebel held territory in Bougainville. Carpet bomb the heart of the resistance. Helicopters were to rain down bombs and bullets on friends, families and forest. Poison. Fire. Blood.

The mercenaries would be richer and the murdered land would be back under control—ripe for mining again. Thankfully this plan was scuppered at the last moment by an uprising on PNG that forced the mercenaries out of the country.

Imagine that had not occurred and put yourself in the shoes of one of the self-described 'ecological revolutionaries' on Bougainville, looking the 1,000s of miles from the Jaba river valley to

A recent example comes to mind. Despite a common enemy (the Indonesian State in particular and the capitalist system in general) communication between the East Timorese and West Papuan resistance movements has been rare.⁴ The beginning of renewed communication between the two movements in part came when people from both were introduced by common friends at a British EF! Winter Moot.

Such instances are bizarre but regular occurrences in history—during the 20th century anti-colonial wave it was within the core that many militants from different countries first met each other. The recent growth of a number of non-centralised libertarian ‘Internationals’ (People’s Global Action, Via Capensina, International Anarchist Federation, EF!, International Workers Association and many radical global internet

networks), is easing communication between majority world radicals (and us in the core of course!) and our minor role as inter-movement communication enablers is likely to decrease but it is still unlikely to disappear.

Issues around security have to be given serious thought when hosting a foreign radical. The state(s) their groups are resisting at home are likely to have embassies and agents here. Whether or not their foes find out who they are and what they have been doing can decide life or death, freedom or prison when re-entering the home country. In many cases states share intelligence so it is not merely a case of avoiding foreign state interest but also domestic state interest.

Hosting Majority World activists is not just our responsibility—it can be immensely rewarding and illuminating.

Supporting Prisoners

Writing letters to prisoners in jails outside the core is one of the easiest—and most real—ways to aid our distant struggling sisters and brothers. Amnesty International rarely support those who are in prison for resisting something, as opposed to just saying something. So it’s up to us to support imprisoned libertarian and ecological saboteurs, rioters, guerrillas, políticos and tribal warriors. Anarchist Black Cross groups have been doing a brilliant

Solidarity Actions

For years we have been barricading ourselves inside corporate offices, disrupting AGMs, blockading petrol stations and going to directors’ houses. These are all valuable and should continue but do they effectively hinder the system or do they largely symbolically oppose it? Let’s first look at what we have done so far.

Our solidarity actions have usually had three objectives:

a) Raising the Spirits: Hearing that people far away care about you and have taken action, however small, can really raise the spirits.

b) Harassing the Attackers: The functionaries ripping the world will back down from individual

job but it shouldn’t just be left to them. A letter from a far off land can help brighten a prisoners day and remind the wardens that people on the outside are looking in.

ChipasLink received a message from a Zapatista prisoner organisation in response to its letter writing campaign. Jose from the Autonomous Municipality of the 17th of November stated: “Morale had been extremely low due to a wave of recent arrests. We were feeling depressed. Letters from the UK helped raise morale and made us feel we were not alone. We want to say thank you.”

attacks only if their profits or their wellbeing is threatened.

c) Exposing the Struggles: Actions increase awareness of both the individual struggle involved and the global struggle in general. This helps us here and sometimes builds direct aid for ‘over there’.

Some solidarity actions over the last decade have needed meticulous planning like the Shell-Mex office occupation.⁵ Others like the daytime smashing of the Nigerian Embassy windows just took two dozen people with pluck.

These actions can sometimes have quite an impact. One office occupation yielded an internal report that stated the actions were harrowing company moral and public image. When loads of us around the country were doing blockades at Shell petrol stations it felt, to be honest, a bit naff.

This has its place but the times call for a more militant attitude. Most of us have little money to protect habitats by buying them up, while ‘protected’ areas are often far from safe. Direct action on the other hand puts the costs onto those who attack nature not those who wish to defend it. Trashing a digger poised to level a copse feels like a far more authentic reaction to ecological destruction than any amount of paper shuffling. For most of us, well targeted direct action is the most

effective and efficient use of our limited time and resources. In the early ‘80s the failure of reform environmentalism made this clear and the radical ecological resistance was born. Militant direct action by warrior societies putting the earth first!

What objectives and strategy can we base our actions around, given the vast scale of the attack and the minute scale of the resistance? This Task section will hopefully give at least a partial answer.

Defending the Living Land

Though it was from an understanding of the *global* ecological crisis that our movement was born it was in *local* ecological land struggles that our movement grew. As stated earlier, we can take pride in the beauty and vitality of habitats throughout Britain that are alive today because of our resistance to infrastructure growth (roads), resource extraction (quarrying, opencast coal mining, peat digging, timber cutting) and city expansion (house building).

These struggles have changed forever all of us who have taken part in them. They have connected us to the earth in a deeply emotional and meaningful way. Exhilaration, fear, empowerment, true human communication, anger, love, homes and a feeling of belonging in both communities and the land; these are just some of what we have been given by these struggles. I emphasise this so that what I say next is *not* taken as a disavowal of British *local* ecological land struggles.

To those of us brought up in Britain’s woodlands, copses, downland and dales these habitats have an immense importance—reaching deep into our soul. However, from a *global* perspective how important are these ecologies given the accelerating biological meltdown?

We must direct our action where it will have most effect. Trauma medics use triage to sort casualties according to priority—which lives are most threatened, which lives are most saveable. In this way they can put their resources where they will have most effect. What we need then is a form of global habitat triage for the biological casualties of civilisations war on the wild. Thankfully in the last 15 years such a system has taken shape, in the form of the Hotspot Theory.

Hotspot Theory was first conceived by British ecologist Norman Myers. First, it makes the task of defending biodiversity more ‘approachable’ by demonstrating that we can conserve a major share of terrestrial biodiversity in a relatively small portion of the planet. Secondly, it demonstrates specifically where these areas are located, and why they are so important, entering into considerable detail on what each of them contains. Third, it elucidates the different threats faced by each of the hotspots.

Myers Hotspot priority system uses vascular plants as the main determinant, given that plants are the primary fixers of energy from the sun and are necessary for the survival of most other organisms.

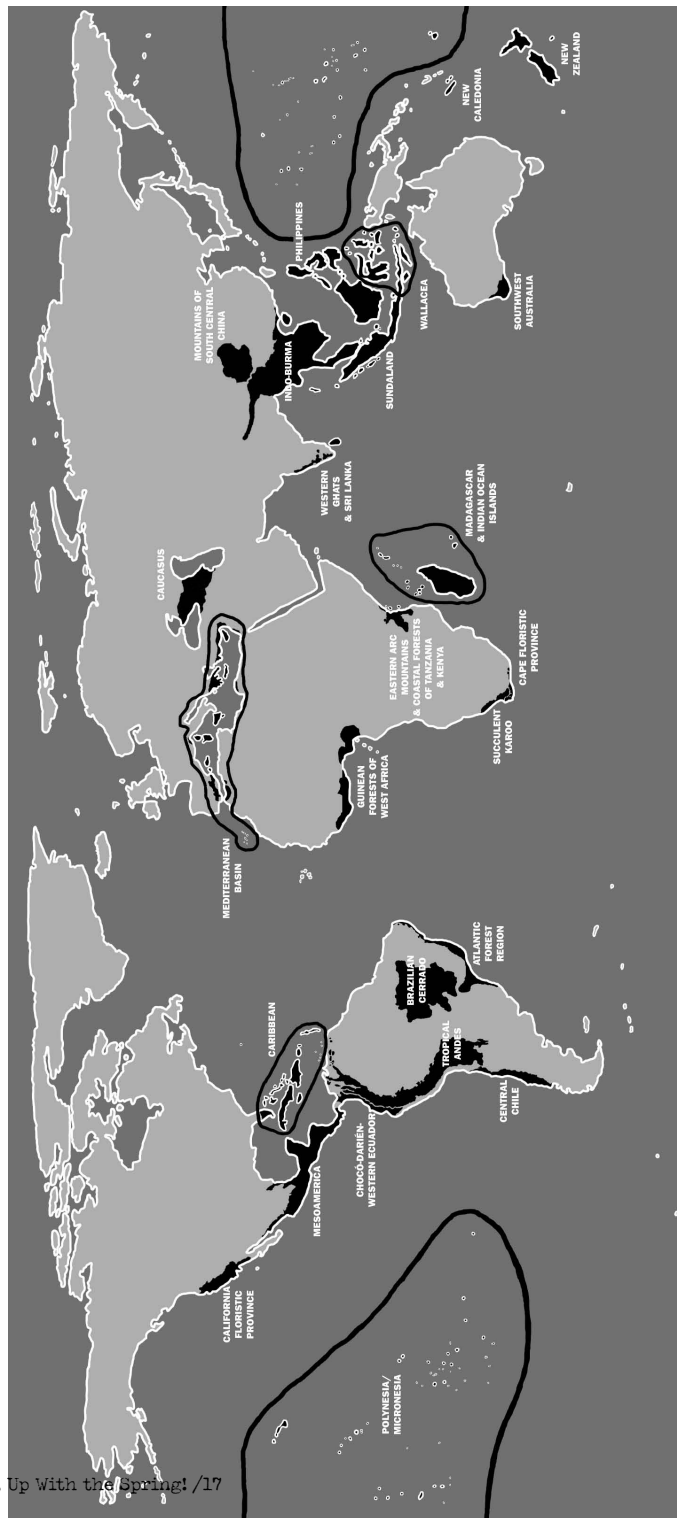

Hotspots are defined with two criteria. First, biological diversity. Secondly, degree of threat. A minimum of 0.5% of total global vascular plant diversity *endemic* to the area in question is the primary cut-off point for inclusion on the hotspot list. The theory uses the most current estimate of vascular plants as 300,000 i.e. the cut off is an area must have 1,500 endemic vascular plants within its borders. Also bird, mammal, reptile and amphibian diversity is taken into account, in that order of importance. The second criteria, degree of threat, has a cut off measure that is; a hotspot should have 25% or less of its original primary natural vegetation cover remaining intact.

Hotspot analysis carried out between 1996-1998 resulted in a list of 25 hotspots and two exceptional mini-hotspots (the Galapagos and Juan Fernandez islands). The hotspots are:

Tropical Andes, Meso-america, Caribbean, Choco Darien, Atlantic Forest Region, Brazilian Cerrado, Central Chile, California Floristic Province, Madagascar and Indian Ocean Islands, Easter Arc Mountains, Cape Floristic Province, Succulent Karoo, Guinean forests of West Africa, Mediterranean Basin, Caucasus, Sundaland, Wallacea, Philippines, Indo-Burma, Mountains of Central China, Western Ghats and Sri Lanka, New Caledonia, New Zealand, Polynesia, South West Australia.

Cumulatively, these 25 areas plus the mini-hotspots have almost 88% of their original area destroyed or denuded with only 12.28% remaining

The Hotspots: Earth's Biologically Richest and Most Endangered Terrestrial Eco-Regions

Students on the Palestinian olive harvest in the '80s. Today Western activists continue to join the harvest to offer some protection to the besieged Palestinians, who are regularly shot at by Israeli settlers and soldiers.

families. Visits by a prisoner's comrades may only result in the visitor himself being interrogated and possibly jailed. This is less likely for Westerners.

Hosting Majority World Radicals

For a whole range of reasons (safety, educational, economic, operational), Majority World radicals can crop up in the core capitalist countries. More often than not they join already existing communities of radical ex-pats, (see 'Immigrant Communities in Rome' below), but for some there may be no community to join. In these cases it is our responsibility to act as good hosts.

Arrival here can be very confusing and we can be useful simply in terms of aiding orientation. Also there are basic needs such as cash, food and accommodation—all of which might be beyond the reach of lone radicals. With ever more repressive state action against economically poor immigrants these basic needs will increasingly come to the

Agricultural Work: One of the commonest forms of on-the-ground solidarity with struggling peasant communities has been just getting stuck in and lending a hand with rural work. In the '70s Cuba was one of the New Left's favourite resorts and many US rads worked the sugar harvest. Similarly in the 80s bundles of British lefties went to Nicaragua to join agricultural work brigades. They in some small way acted like an international Red version of the WW2 Land Girls—enabling peasants (this time men and women) to go to the front without their land falling fallow. Putting aside (BIG) political differences over the nature of the Sandinista and Cuban STATES, the work these anti-imperialists did was practically useful (though minor in scale).

In Chiapas, 'Human Rights Observers' have taken part in the work of the communities too, rather than just hang about waiting for the next military incursion. At the time of writing, similar work is underway in Palestine where Israelis and foreign activists are picking olives in frontline Palestinian villages. This is in reaction to the shootings, by Zionist settlers and the army, of Palestinians doing the harvest on exposed positions. While I have put agricultural work under the general heading of non-specialist it would be foolish to underestimate the skill and labour involved in peasant work. Friends have remarked on their sudden-found frailty compared to much older Zapatista peasants. Even those with agricultural experience will find the day demanding. But all are likely to find the work rewarding, and working with others can be the best way to really get to know them.

fore. If they are here legally they will probably need help dealing with visas and travel arrangements.

Depending on the purpose and duration of their stay they may want help in projects here in the core aimed directly at helping their people, or they may wish to start conventional solidarity campaigns with speaking tours, newsletters etc. It should be left to them to ask what they want of us, rather than we presupposing what would be useful.³ We can also be of use in providing many types of information—from the political to the technical.

We can catalyse communication between them and members of other similar groups from their regions who may be in the core. Ironically it is often within the core that many groups from the Majority World meet for the first time. Logistics and state repression at home can be a major barrier to inter-movement/international discussion.

movements—especially guerrilla ones—isolated within themselves, from the people as a whole and from international solidarity. They are by no means essential—and in some situations an unnecessary danger—but they can make the way easier.

Appropriate Technology: If you're good at turning rubbish into useful things, there is always a place for you. At whatever stage of struggle innovation is always needed. Bougainville showed how far you can get with appropriate technology—water power turbines running lighting and lathes for making home-made guns and coconuts fuelling cooking, BRA unit jeeps and pretty much everything else. However, be wary of any tendency to push development through technology!

Weaponry and Warfare: It's extremely unlikely that if a group has modern weaponry it will need Westerners to tell it how to suck eggs. However, if you're an ex-squaddie, you might be useful in some struggles—not so much as some sort of unpaid mercenary, but more for any specialist knowledge the state may have taught you.

On the Ground Solidarity Work NOT with Specialist Practical Skills

If you have little of the skills described above you can still—depending on the struggle—be of possible great use on-the-ground. As an anarchist Westerner one is in the peculiar position of, upon leaving the West, being able to do certain things merely because of the passport one carries or the colour of one's skin. The following is just a short list of some useful roles. It is worth underlining that these can largely only be carried out in situations no more intense than low intensity warfare.

Human Shield/Human Rights Observer: The presence of Westerners can decrease the likelihood of some forms of assault on communities. As an example, aerial bombardment and artillery are less likely if there's awkward Westerners who it's embarrassing to kill hanging about. In some situations making the state do its massacres by hand decreases the state's in-built military advantage. Sometimes the mere presence of a Westerner can cool a situation—albeit temporarily. Such work has been very useful in various places but most solidly in Chiapas. Situations are different between countries AND within countries. One activist who went to West Papua found his presence did have a positive effect in one area, a negative effect in another.

Media work: As Western activists we have greater access to the international media than native communities. Though liberals put too much stock in raising the profile of struggling groups, it can make a real difference. Footage and reportage of strikes, rebellions, armed struggle, riots and general chaos can be the deciding factor that

convinces a company it is not worth investing in such a trouble spot.

Travel Companion: The presence of a Westerner with limited 'immunity' to arrest, torture and disappearance can be very useful when exiled radicals attempt to re-enter their homeland. Airports and border crossings can be very dangerous. A Majority World friend told me once that despite being wanted by the state, when he was back among the mass of his people he felt relatively safe. But entering his country was terrifying. Would the patrolling secret police become suspicious and guess who he was? Would they check his passport was 'fully in order'? Alone in the airport, he could have been picked up and nobody would know that he had been taken. No outside support would come to a man no-one knew was missing. For this reason, a British activist went with him so that at least his people and solidarity groups would know they needed to look for him. Of course, the very fact of travelling with a Westerner can arouse suspicion so it is not always a good idea. One Kurdish anarchist was asked if she wanted such a travelling companion, but she believed in Turkey it would make no difference. For her, possible torture or worse was merely the luck of the draw.

Prison Visiting: Westerners can sometimes get into places that might be difficult for locals. Also for different reasons there may be no organised prison visiting programme by a native community. Prisoners could be held in far off jails maybe hundreds of miles away from their friends and

intact. This intact percentage amounts to just 1.44% of the land surface of the planet—a little smaller than the EU!!!

A staggering 131,399 vascular plants are endemic to the hotspots representing 43.8% of all plants on earth. Adding in estimations of non-endemic plant species found within the hotspots brings us to an even larger figure.

"At least 65.7% and more likely 70% or more of all vascular plants occur within the 1.44% of earth's land surface occupied by the hotspots."⁴

This indicates a vast percentage of all life in other species groups—mammals, avi-fauna etc. In fact 35.5% of the global total of non-fish vertebrates are endemic to the hotspots. Once again, adding in estimations of non-endemic non-fish vertebrates, we come to a figure of at least 62%. Maybe perhaps 70% or more of all non-fish vertebrates occurring in the hotspots. As the authors of Hotspots say themselves:

"If 60% or more of all terrestrial biodiversity occurs in the most threatened 1.44% of the land surface of the planet, it is difficult to avoid the conclusion that these areas deserve a lion's share of our attention over the next few decades. Indeed, if... we are at risk of losing one third to two thirds of all

70% of the Philippines' 500 species of endemic land vertebrates are endangered. Only quick, strong action will save species like the kitten-sized Tarsier.

species within the foreseeable future, and if almost two thirds of at least the terrestrial species are in the hotspots, then it seems fairly obvious that we may make a major dent in the entire endangered species/mass extinction problem by placing very heavy emphasis on the hotspots."⁵

This analysis is immensely useful, and has been refined further. Lots of number crunching later leads to a 'top 9' Hotspot list:

Tropical Andes, Sundaland, Meso-America, Indo-Burma, Caribbean, Atlantic Forest Region of Brazil, Madagascar, Mediterranean Basin & Choco-Darien (Western Ecuador).

These 9 areas account for 29.5% of all vascular plants and 24.9% of non-fish vertebrates. This in just 0.73% of the planet's land surface—around half of the size of the EU!!

Further analysis on threat highlights three hotspots; the hottest of the hot. They are:

The Caribbean, the Philippines⁶ and Madagascar.

If this theory is correct, and there is every reason to think it is, some solid conclusions can be drawn:

- 1) At this moment in time radical ecologists around the world must do everything in our power to defend the 25 Hotspots.
- 2) Serious action must be taken to halt or slow the destruction of the three hottest hotspots.
- 3) Northern Europe appears nowhere on the hotspot list. In fact it has a relatively low level of biological diversity thanks to a combination of climate, past glaciation and human habitat destruction. We should obviously continue to defend Northern European habitats. *However in the context of the global biological meltdown, struggles to defend Northern European habitats are entirely peripheral.*
- 4) The appearance in the hotspots list of the Mediterranean Basin should focus us in Europe. The fact that a hotspot covers parts of the EU is a surprising revelation and one that has serious repercussions.
- 5) Given serious action, the preservation of significant sections of global biodiversity is a real possibility, if only because it could involve such a small percentage of global land surface.

These conclusions combined with a sensible analysis of our powers (as radical ecologists primarily in Northern

Europe) begin to give us answers to the urgent question posed earlier. Where to start?

A hierarchy of *global* priority setting can follow the pattern: global > regional > national > local > specific sites. Obviously, given our location and limited powers, the priorities set by such a system cannot be transferred immediately to a list of practically realisable objectives. Beyond this we can also set a hierarchy of priorities for *local* habitat defence here on our island and its environs—understanding all the time these struggles' largely peripheral role in the global *direct* defence of diversity. For now I will talk of the global terrain. What follows is a hierarchy of top priorities for terrestrial habitat defence set in light of the hotspot theory.

The Hottest of the Hot

At the moment the three hottest are *undeniably* the global priority areas for defence. Unfortunately, facing reality we can have very little direct effect on these areas—at present. This is likely to remain so for the medium term at least. Let's not fool ourselves. We often ignore threatened habitats in Britain because they're more than a few hours drive from an 'activist centre'. The Caribbean, Madagascar and the Philippines. I don't see any of our ropery vans getting there any time soon. However, let's look at them one by one.

Madagascar: This amazing island has been at the centre of global conservation concern for decades. A number of British companies are involved in trashing it, our old friends RTZ for example. Actions against them would be very, very good. It is here, if anywhere, that the global conservation NGOs have some chance of using big money to big effect. Like it or not, they are probably the islands greatest hope. Many of them are using the Hotspot Theory to set their priorities so their targeting of Madagascar is increasing.

Philippines: Of the three hottest hotspots it is in the Philippines that we have most extensive contacts. A number of EF! groups are active. Growing out of anarcho-punk there is a small but growing active eco-minded anarchist scene. Peoples' Global Action (PGA) called international days saw sizeable mobilisations, and anti-GM direct action by peasants is on the up. A number of communities are resisting the logging and mining that is destroying their areas. A remnant of the original gatherer-hunter population of the Philippines survives. We need to talk more to Filipino groups to find out how we can best help. Solidarity actions, communication and funds should all be disproportionately channelled their way. UK based companies are active and possibilities for joint action should be pursued. While this responsibility belongs to us all, some people from our scene need to take on acting as primary

intermediaries and push this forward—catalysing communication and action.

The Caribbean: To put it lightly, many more people in Britain have links with the Caribbean than with either the Philippines or Madagascar! At a guess I'd say that of the Majority World hotspots it is with the Caribbean that Britain has most personal (rather than corporate) connections. Unfortunately environmentalism, for reasons around race and class, is almost devoid of British Afro-Caribbean involvement. Thus ecological struggles are happening in the region but are largely off our radar.

While steps must be taken to remedy this,⁷ our potential as a (predominantly white) movement to support this region is much smaller than that of the Afro-Caribbean communities. Some within these communities are working on the issue. It'll be nothing to do with us if any major expansion of activity happens, so there is little point going into detail here. One thing is worth emphasising though. Mobilisation by Afro-Caribbean groups has the potential to be the most meaningful support work done by Brits for any of the Majority World hotspots. Given the regions position as one of the three hottest hotspots it could be the most *globally* important eco-action carried out here. We have reason to hope for such a situation, and corporate ravagers of the Caribbean based in Britain have reason to fear it.

One of our main entry points for far off lands—anarchism—is little use to us in the Caribbean where anarchist groups are pretty much non-existent. Cuba is the only island where a sizeable movement ever took root, and no organisations survive now thanks to Castro's social weeding.⁸

The Caribbean is one of only two hotspots whose area is partly within the US. Unsurprisingly we know more people in Florida than say, Haiti. EF!ers are active in Florida and good solidarity actions for them would be great.

propaganda for your pennies! As an example a donation of \$40 from anarchists in the US paid for a campaign of stickers, posters and leaflets by anarchists in universities across the Czech Republic. Another good recent example is the

funding and provision of basic radio transmission and studio equipment by Black liberationists in the US to the anarcho-syndicalist Awareness League in Nigeria.

Travelling to and Joining their Struggle

Revolutionary tourism—a contentious subject! I would say that, despite limitations, Western activists can be very useful on the ground in Majority World struggles—as long as they take their cue from native groups and don't just follow their own agenda. This opinion is shared by the Mexican EZLN, the Free Papua Movement (OPM), the Bougainville Revolutionary Army (BRA), Anti-Dam communities in India and the Rainbow Keepers in Russia; all of which have recently asked for foreign radicals to come to their lands. From the perspective of the volunteer, sojourns in others struggles can be extremely instructive.

Activists should only take part in this on-the-ground solidarity at the invitation of the communities themselves. In some situations, the presence of a foreigner can bring down hassle on the community and just be another mouth to feed. The communities will know what is needed and what is applicable.

Three years ago some EF!ers and friends published a great basic guide to what one can practically do on-the-ground in Chiapas. Though much of it will be inapplicable to other struggles, I urge anyone thinking of engaging in a bit of revolutionary tourism to read this book which goes into far greater detail than I do here.²

Essentially, the useful work that can be done by Western activists can be divided into work involving: 1—Specialist practical skill and 2—Work which involves very little specialist practical skill. I'll deal with these two areas separately.

On-the-Ground Solidarity Work with Specialist Practical Skills

The nature of the struggle will define what skills outside radicals can provide that might not be available or plentiful to struggling communities. In general, external specialist technological expertise is more useful in less urban struggles. I'll list just a few of the most obvious useful skills that have been requested by movements in recent years.

Medical Expertise: This is the one skill that without a doubt is always needed and never available enough to radical groups. Whatever form the struggle takes—violent or non-violent—resisters will get attacked by the state. Whether it is mass demonstrations, small blockades or guerrilla actions, those engaged in struggle risk injury and often death. Medical support on the ground can make all the difference. Whole movements sometimes operate with practically no medical support at all—at a terrible cost. This is especially true of indigenous groups such as the OPM.

Radio and Communication Technology: Many movements have got this sorted but many more have not. Communication technology needs divide into three areas: a) Internal organisational communication—such as radio links between different groups throughout a country and different cells on actions and demonstrations. b) External communication to the domestic population at large—such as mobile pirate radio systems c) International communication to movements and groups world-wide—such as mobile phones, long distance radio and internet set ups. Lack of electronic communication systems can leave

to take sides with the state and corporations. The carrot-and-stick approach aims to disconnect the population from radicals in its midst, and form counter-gangs to oppose them. By supplying aid money directly to struggling communities we can in part oppose this process through positive action. For instance one minor punk benefit gig in America paid for a Zapatista (EZLN) community to be connected up to clean water. One US/Mexican anarchist federation quickly raised enough money to set up a women's health clinic in Chiapas.

Regimes often purposefully spread diseases in rebellious populations and put up medical blockades. This is exacerbated by the fact that many struggling communities do not have basic immunity to Western diseases and live on marginal land, or in slums and shanty towns. Thanks to malnutrition they often have weakened immune systems from the start.

One Bougainvillian told me that due to the medical blockade by Papua New Guinea (PNG), £25 raised in Britain to smuggle in medical aid could save the life of half a dozen revolutionaries on Bougainville. If that's not a good deal I don't know what is! Saving the lives of six, self-described ecological revolutionaries, for the price of a couple of rounds down the pub and a curry!

2) Money for Refugee Camps

When people try to defend themselves and their land, the resulting military repression often forces a significant proportion of the population to flee over borders to the relative safety of neighbouring countries. The resulting life of the refugee can vary tremendously but is almost always hard, poor and cramped. Often forced to rely on outside support, refugee communities sometimes find none at all.

When the Nigerian military cracked down on the Ogoni resistance against Shell Oil, around a third of the Ogoni fled their home villages, many of which had been razed to the ground. Thousands fled to camps in neighbouring countries where they lived for months in squalid conditions. A small amount of medical aid, clothing and funds were collected in Britain and sent over by a solidarity group and by Ogoni living in London. In a desperate situation this aid made a real difference.

However, it was still very little compared with what could have been raised. At the time the Ogoni were big in the newspapers and hundreds were willing to risk arrest in petrol station blockades across the country. Tens of thousands could easily have been raised by local groups. Even without public fundraising a sizeable amount could have been raised very quickly. At least 300 people took part in the petrol station blockades. If just those 300 people had each put in a fiver £1,500 could have been raised at the click of our movement's fingers—enough for a sizeable aid package!

Recently a couple of hundred quid was sent to Papua New Guinea. This paltry amount paid for a consignment of anti-malarial drugs for West Papuan refugees.

3) Money for Prisoners

Of course, any movement which gains any success will quickly find some of its number in prison. Being in prison in Europe is no picnic and our movement's prisoners desperately need more support than they get. Most of the problems we associate with prison support here are similar outside of the West but in more drastic ways.

Family visits, if allowed at all, are often costly both in travel and in bribes. In many Majority World countries a prisoner will not be fed from the prison budget but will have to rely on his community to supply either food itself or money to the prison in order to stay alive. (It's worth pointing out this used to be the case in many British prisons hundreds of years ago!) In the usually horrendously unhygienic conditions decent doctors also have to be paid for. Even the smallest 'privilege' can be impossible without bribes to prison officials. Legal aid will also have to be paid. This financial burden can cripple families. Increasingly, the time and energy a community used to put into revolutionary action has to be put into raising funds to keep its prisoners alive and relatively healthy.

Over the last few years British Anarchist Black Cross activists have raised hundreds of pounds for East European anarchist prisoners and their support campaigns. This money has been a large boost because hundreds of British pounds in countries like the Czech Republic and Poland translates into a lot of money. In the Third World this is even more the case. Ridiculously small amounts of money can make a real difference to those in cages in the colonies.

4) Money for Agitation and Propaganda

Why not sponsor a pamphlet, leaflet, book or poster campaign by an anarchist/ecological group outside of the West? You'll definitely get more

The Top Nine Hotspots

Moving down one level of priority to the top nine we find similar patterns to the top three. These regions are *largely* out of our direct reach. We can do little at the moment but actively supporting radical ecological influenced groups in these areas. Groups in the top nine should be given disproportionate support and direct aid.

Covering less than 1% of global land surface, mostly in 'Majority World' locations, the top nine are of immense importance. In this context even relatively minor conservation programs are worth supporting—physically and financially.⁹

Of course this kind of thing is all well and good but we've rarely shown ourselves to be particularly brilliant at sustained international solidarity. We need to build a strategy based solidly on our strengths. Stopping developments. Fucking shit up. Blockades. Sabotage. Land occupations. Broken windows and crippled corporate confidence. To be really effective we need terrains of struggle which are both easily reachable and globally important.

Thankfully one of the top 9 is within our reach—the Mediterranean Basin. The Med is both amazingly biodiverse and under serious threat. Due to this hotspot's direct relevance to us and our activity I have re-printed here an essay by N. Myers and R. M. Cowling from the Hotspots book. I have shortened it due to space constraints. It's more eloquent than I, so read it and then return to me.

This huge hotspot stretches from Portugal to Jordan and from the Canary Islands to Northern Italy. It encompasses all of Cyprus and over 90% of Greece, Lebanon, and Portugal, though less than 10% of France, Algeria, and Libya. In Spain, 6,000 of the country's 7,500 plant species occur within the Mediterranean climate zone, in Israel 1,500 out of 2,200, and in Morocco 3,800 out of 4,200.

The flora of the Mediterranean Basin includes 25,000 species of vascular plants, 13,000 of which are endemic. This figure is very high when compared to the 6,000 species of non-Mediterranean Europe in an area nearly four times as large. It is also the third highest of all the hotspots, being surpassed only by the Tropical Andes and Sundaland.

The Basin's violent geographical history has produced an unusual geographical and topographical diversity, with high mountain ranges, peninsulas, and one of the largest archipelagos in the world. The Mediterranean Sea includes several hundred islands.

In mammal and bird faunas endemism is moderate, at 25% and 14%. The reptile and amphibian faunas on the other hand, have levels of endemism of 61% and 52%.

The typical and most widespread vegetation type is a hard-leaved shrubland dominated by evergreens. Shrublands, including maquis and the aromatic, soft-leaved and drought deciduous phrygana, have persisted throughout the Quaternary in the semi-arid, lowland, and coastal regions of the Basin. However, prior to the onset of significant human impact, which started some 8,000 years ago, most of the Mediterranean Basin was covered by some

The Mediterranean Hotspot

form of forest, including evergreen oak forests, deciduous forests, and conifer forests.

Endemics are concentrated on islands, peninsulas, rocky cliffs, and mountain peaks. The principal foci in the Mediterranean are 10 smaller 'mini-hotspots within the larger hotspot'. These 10 are areas in which unusual amounts of original vegetation still survive and where many of the endemic species hang on, albeit several threatened. These areas cover about 15% of the Basin's total area, yet account for almost 4,800 endemics, or 37% of the total tally. Clearly, these are priority sites for conservation of these plant components of Mediterranean biodiversity.

Diversity and endemism among Mediterranean Basin vertebrates is much lower than for plants. The present number of land mammals in the region is about 184, of which 46 (25%) are endemic. During the Holocene, but especially in the last few thousand years, many of the larger mammals became extinct because of aridification, habitat alteration, and persecution. The earliest victims included some spectacular species like dwarf hippopotamuses and elephants on some islands. These were followed by other large mammals, including the African elephant, wild ass, scimitar-horned oryx, northern hartebeest, and lion. Still others are so severely depleted as to be on the verge of extinction, among them the brown bear, leopard, and Mediterranean monk seal.

The region's avifauna includes about 345 breeding species of which only 47 (14%) are endemic. A few small portions of the Mediterranean Basin also appear as priorities in BirdLife International's recent global analysis of Endemic Bird Areas (EBAs). These are Cyprus, with two bird species confined to that EBA, and Madeira and the Canary Islands, with 9 species, 8 of them confined to the EBA, and one species, the Canary Islands oystercatcher already extinct.

Endemism is much better developed in reptiles, with 179 species, 110 (61%) of which are endemic, and amphibians, with 62 species, 32 (52%) of which are endemic. Reptile diversity is highest in the drier, eastern and North African parts of the Basin, whereas the opposite is true of amphibians. For both groups, the Mediterranean Basin is an important centre of diversity and endemism for some families.

As is the case for the other hotspots, much less is known about the invertebrate fauna. One of the exceptions are the insect pollinators, which have been relatively well-studied as a group. The dominant pollinators are bees, with an estimated 3,000–4,000 species.

Flagship Species

The Mediterranean Basin is characterised more by its plants than its animals. Among the interesting plants are the cedars: one endemic to Cyprus and represented only by a very small relic population; another, fairly abundant in Morocco and Algeria but experiencing very rapid depletion by timber cutters; and a third, the famous Lebanon cedar, mentioned below, hangs on in Lebanon, Syria, and Turkey. Another interesting endemic flagship species is the only palm tree native to the Basin, found exclusively in a tiny corner of Crete and on the Datca peninsula in Turkey, where it is threatened by tourist development.

A number of animals qualify as flagship species as well. Particularly noteworthy are the 'Mediterranean' tortoises, four in number. Among the endemic mammals, there are several standouts as well. The Barbary macaque is now found in relatively small and disjunct habitat pockets in the Rif, Loya, and Haut Atlas mountain ranges of Morocco, and in the Chiffa, Petite, and Grande Kabyles mountain ranges of Algeria, with a small, well-known population on Gibraltar that lives in a free-ranging state but is provisioned. It is believed that the Gibraltar macaques were present since early times, but have been sporadically replenished by imports from Morocco. *The Gibraltar macaques are now the only free-living nonhuman primates in Europe.*

The Barbary deer is confined to a small area of cork oak and pine forest on the border between Algeria and Tunisia. The population is down to only a few hundred individuals, including those in captivity in both countries. The Corsican red deer is considered extinct in Corsica, and is now found only in three mountainous areas near the southern coast of Sardinia. The total population is only about 200.

The Mediterranean monk seal, though primarily a marine species, does use coastal beaches and has long been an important symbol. It was once distributed throughout the Mediterranean, the Northwest coast of Africa, and the Black Sea. Today, the approximate 400 animals that still survive have been pushed to isolated spots in Turkey, Greece, the Atlantic coast of Morocco, Mauritania, Sardinia, Algeria, and Madeira.

Remnant populations of other once wide-ranging mammals include the brown bear, which still hangs on in the mountains of Spain, France, Italy, Greece and some of the Balkan countries, and two subspecies of the leopard, the North African leopard and the Anatolian leopard, both of which are considered critically endangered.

Solidarity is also a Weapon

All over this earth millions of peasants, workers and tribals are defending themselves and the land against constant assaults by capital. In every nation the war between the classes escalates and at present it is the rich that are winning most of the battles.

Ever since the radical ecological direct action movement emerged, one of its central themes has been support for struggles in the Majority World. The communities we have chosen to support have reflected changes in our worldview and how we see ourselves.

At first, only 'non-violent' struggles were given any support. This can be illustrated by looking at the Direct Action Empowerment Video—produced in early 1993. The film (which I like, despite some cringe-worthy moments) covers ecological conflicts around the world. The only Majority World struggles given space were the Narmada protests, the Ogoni in Nigeria and the Penan logging blockades in Sarawak. At the time, all three communities professed some sort of non-violence code. The tactic of 'non-violent' confrontation is pretty rare in the Majority World, for sensible reasons, so this selection is quite revealing. During the '90s most of our circles abandoned the ideology of non-violence and as a result we have increasingly been supporting those engaged in armed resistance to the global empire. Now perceiving ourselves as 'revolutionaries', we are engaged with revolutionary communities.

Originally our actions were media-centric, trying to bring press attention to the plight of our 'adopted' peoples. Now that we see ourselves involved in a growing network of communities in resistance, how do we engage in real solidarity?

Zapatistas confront the Mexican state in the Lacandon jungle.

Real solidarity with a rebellion abroad is (as the Zapatistas hammer on at us) creating rebellion at home. Only a truly global rising will put an end to class society/civilisation and give birth to a new world. Fighting not *for* them but *with them* against a common enemy. However, there are some important things that we are well placed to do. Below is by no means a complete list.

Direct Cash Aid to Struggling Communities

Thanks to exchange rates small amounts of hard currency can have a much larger effect in Majority World countries than it does here. Providing practical financial aid for revolutionary groups abroad should not be seen as charity. It's merely a tool of solidarity that we have available to us as a result of our position in the highly monetised capitalist core.

1) Money for Community Health and Survival

The types of low intensity warfare that many groups find themselves in are not fought out simply between soldiers and armed groups. They are fought out in the 'hearts and minds' of the community as a whole. A long established tenet of counter-revolutionary warfare is to firstly grind down the subsistence and health of a population. Secondly, at the moment of desperation, offer medical, educational and technical aid to families and villages within the conflict zone who are willing

IV

Supporting Rebellion Beyond the Core

The counter-culture must act in real solidarity with our struggling sisters and brothers on other islands. Aid them in whatever we can and bring the 'majority world' battlefronts to the boardrooms, bedrooms and barracks of the bourgeoisie.

"Our intention is to disrupt the empire. To incapacitate it, to put pressure on the cracks, to make it hard to carry out its bloody functioning against the people of the world, to join the world struggle, to attack from the inside."

—Prairie Fire, The Weather Underground Organisation, 1974

"Mohammed Singh Azad. Sindabad! No apologies. Not a shot in the dark. This is a warning. The sleeping tiger awakes each and every morning. The time is now right to burst the imperial bubble. And my act of revenge is just a part of the struggle. A bullet to the head won't bring back the dead. But it will lift the spirits of my people. We'll keep on fighting. We've been a nation abused. Your stiff upper lip will bleed. And your pride will be bruised. I'll shake hands with the hangman. I'll wear the noose with pride. For unlike the British I've no crimes to justify. Pentonville will be my last place on earth. And then death will return me to the land of my birth."

—Assassin, Asian Dub Foundation¹

Threats

The present human population of the Mediterranean Basin is some 300 million, although population pressures have existed for millennia. Indeed, there is no other region in the world where the development of ecosystems has been intimately associated with human social systems for so long. The region has been home to sizeable human settlements for well over two millennia and significant human activity for another six millennia (there was a large town in Turkey 8,400 years ago!). In Roman times, the more fertile parts of Tunisia and Algeria—Rome's 'bread basket'—were laid waste through agricultural overuse, and the historian Pliny warned the ancient Greeks of the damages of deforestation. In Lebanon, the uplands were once covered with stately cedars whose height, strength, and utility became legendary throughout the Old World. Felling of the trees started as early as 3,000 BC, when the Phoenicians began a lucrative trade in cedarwood with the Egyptian Pharaohs and King Solomon, among others. Now the Lebanon highlands have lost most of their trees, and the cedar is a threatened species.

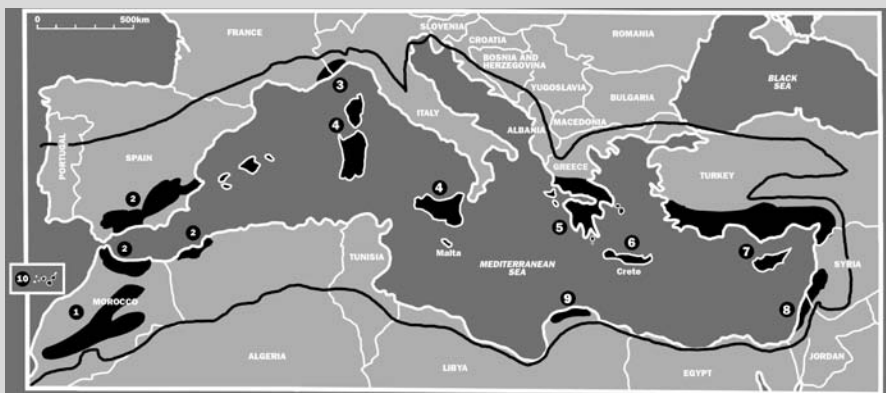

The Gibraltar macaques are now the only free-living nonhuman primates in Europe.

The impact of this long history of human assault on Mediterranean ecosystems has been huge. Perhaps the most severe transformation has been the conversion of forests, especially primeval deciduous forests, to agricultural lands, evergreen woodlands, and maquis. The first significant deforestation began as early as 8,000 BC, and increased dramatically at the end of the Neolithic. Each wave of civilisation created new pressures on the forests, culminating in the rapid human population growth and widespread increase in mechanised agriculture of the present century.

A crucial factor is fragmentation. The original vegetation has been reduced to only small patches today. This is hardly more than to be expected of a region that has been heavily settled for over 2,000 years, longer than any other hotspot. While some vegetation fragments still total several hundred square kilometres, many are less than 100 km², a few are 10 km² at most, and one or two are down to a final handful of hectares. Equally significant are many of the 13,000 endemic plant species, which are 'narrow endemic' confined to unusually small areas. This makes them exceptionally susceptible to threats such as expanding farming, overgrazing by domestic stock, and spread of urban communities. Indeed, probably more species have already been driven to extinction in this hotspot than in virtually any other, some species having been eliminated many centuries ago, totalling probably hundreds of plant species alone. *As for threatened species, the total for plants is put as high as one half of the entire flora.*

The outlook is not propitious, if only by reason of the surge in human numbers and their demands. While one can readily point a finger at population growth in non-European countries it is Northern Europeans that generate most of the tourist influx to the shores of the Mediterranean as the biggest large-scale tourist attraction in the world. There are around 100 million visitors per year already, scheduled to become twice as many within another two decades. The tourism sector is flourishing and expanding its disruptive impact in Spain, France, Italy and Greece, and increasingly in Turkey, Cyprus, Tunisia and Morocco. Through the spread of hotels and associated buildings, the construction of roads and other infrastructure—plus the impact of millions of feet trampling through fragile environments every day—tourism has caused exceptional damage. It is now the most serious threat to seminatural areas in Western and Southern Turkey, and in Cyprus, Tunisia, and Morocco, a list that may shortly be joined by Greece among several other countries, particularly as concerns the Mediterranean islands such as the Balearics, Corsica, Sardinia, Crete, and the Canary and Madeira islands.

The Mediterranean Red Alert Areas

- 1) Atlas Mountains
- 2) Rif-Betique in Southern Spain and two coastal strips of Morocco and Algeria
- 3) Maritime Alps of the French-Italian border
- 4) Tyrrhenian Islands (Balerics, Corsica, Sardinia and Sicily)

- 5) Southern and Central Greece
- 6) Crete
- 7) Southern Turkey/Cyprus
- 8) Israel and Lebanon
- 9) Cyrenaica (the Libyan 'bump')
- 10) Canaries/Madeira Islands

There are also growing threats from what has always been the number one competitor for natural environments, agriculture. More people generally means more farmland to support them. The main agricultural threat today lies within food demands from people in far-off lands. Consumers of Northern Europe are becoming accustomed to strawberries and carnations right around the year, and during October-March they turn to warmer climates for supplies. Thus the speedy expansion of horticulture in many parts of the Basin; the market is already huge.

As for population growth, the countries of the Southern and Eastern seaboard are projected to increase their numbers by 54% as early as the year 2025. Partly because of population pressures, environments are declining apace. Morocco, Tunisia and Libya each are losing around 1,000 km2 to desertification every year, and Algeria still more.

All of these factors contribute to making the Mediterranean Basin one of the hottest of the hotspots; indeed in many ways it is hyper-hot, scoring very high in the fundamental criteria that we use to define hotspots. It is exceptionally rich in diversity, especially plants, and second in the world in plant endemism. In is also highly threatened, and in fact has the lowest percentage of natural vegetation remaining in pristine condition of any hotspot.

Conservation

The Basin's protected areas are of diverse sorts and cover 1.8% of the total area.

Today, most countries of the Basin are planning substantial increases in their protected area

systems. But due to the demands of agriculture and other activities that absorb large tracts of natural environment, many protected areas are too small to meet the imperatives of 'island biogeography'. Moreover, many protected areas suffer some effects of pollution arising far outside their specific locations. Some of them are short of water after feeder rivers rising in distant watersheds have been diverted for industry, agriculture, and urban communities. All of these problems are likely to become more pronounced as human numbers and human demands keep on growing—and that is without counting the rigors of enhanced U-VB radiation through the depleted ozone layer and the onset of global warming with its many dislocations of plant communities. In a greenhouse-affected world, plant and animal communities will try to follow warm-temperature zones as these head northwards. Those in Northern Italy will have to try to migrate over the Alps and those in Eastern Spain over the Pyrenees, while those in Western Spain and Portugal will find themselves migrating into the Bay of Biscany.★

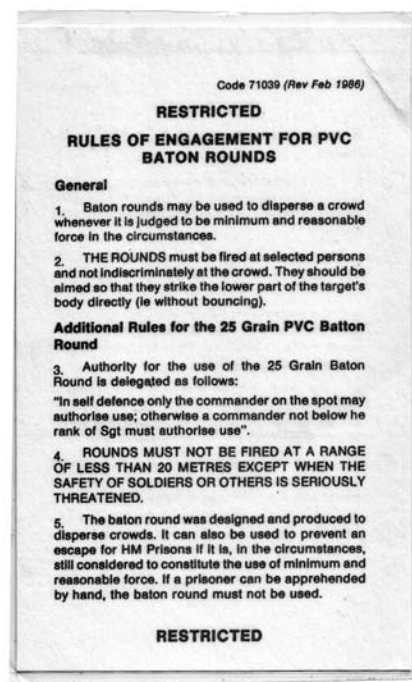

The Gomeran laurel forest in the Canaries is the one surviving remnant of an ecology which once covered much of Mediterranean Europe.

Notes

- 1) The 1970s crisis and the secret state destabilisation of a succession of Labour governments is a rarely mentioned but extremely important part of recent British history: "A substantial section of the British Secret state and its allies in the Conservative party, business and the media believed, or found it useful to pretend to believe—the distinction is difficult to make—that British democracy, the state, and even the capitalist system itself was under threat from a resurgent left, spearhead by the trade unions and manipulated by the British Communist Party under instruction from Moscow..."—from *Lobster Magazine* No. 34, p.32.

Radical Right militias led by intelligence and military men were formed. Newspapers openly discussed the right circumstances for Army intervention in Britain while M15 orchestrated black propaganda against the Labour Cabinet and trade union leaders. Joint military and police operations were carried out at Heathrow Airport without government sanction. Plans were advanced to install an unelected government of 'National Unity' lead by Lord Mountbatten. No unsubstantiated conspiracy theory, this was first exposed in an autobiography by an ex-Daily Mirror executive who was actually at a meeting with some of the conspirators and a long time M15 agent. Similar

Above is a pocket card carried by English soldiers in Ireland. Those of us living in Britain should not feel complacent: mainstream sources confirm that orders to use baton rounds were issued for an anti-Criminal Justice Bill demo in 1994. Demonstrators scaled the gates of Downing Street—had many of them actually made it over the gates into the street, orders were that a volley of plastic bullets should be fired.

manoeuvres within the military continued through to the mid '70s.

The parapolitical background to the '70s crisis is essential to any understanding of the death of the post-war consensus and the triumph of the Thatcherite radical right. It's amazing to realise how near to the brink Britain really was! See *Who Framed Colin Wallace?* by Paul Foot, (Macmillan, 1988) and, *Sneak: Wilson and the Secret State* by Stephen Dorill and Robin Ramsay, (Fourth Estate). These are still the best and most fully documented accounts of the Wilson plot.

- 2) After the collapse of the state-backed pyramid scheme much of the Albanian population were left destitute. As a result in 1997, "Albania experienced one of the most profound proletarian revolutions of the Twentieth Century. Virtually the entire armed forces mutinied whilst workers formed revolutionary councils and seized 80% of the country... the Albanian Government was not going to extinguish the Albanian revolution because there was no longer a government. The revolution had extinguished the Albanian state. The world's investors began to panic. It took the armies of ten countries to crush the Albanian revolution and it was a close call..." 'Kissing goodbye to their Koreas', *Black Flag* No. 213, p.22.
- 3) Blatantly crazy millenarian revolts and the pro-peasant social reorganisation following the Black Death, are examples of the positive effects of past social ruptures, themselves arising from mass explosions of personal physical and mental health problems. On a similar but more depressing note we can look at the global rise of the West, enabled in large part by the mass deaths that Western disease brought to indigenous peoples.
- 4) I'm talking here about crisis as opposed to counter-revolutions. Counter-revolutions are essentially attempts by elites to counter and destroy the self-organisation of peasants and the working class—Roll back (r)evolution. While counter-revolutions by their nature presume the existence of large movements of the politically aligned, crises can break out when the majority of people are 'non-aligned'. I do NOT use the phrase non-aligned to mean apathetic. Most people today in Britain would not align themselves to any group of 'politics' for a whole host of very sensible reasons.
- 5) Here I am talking about those who really lived inside the activist cultures of squatting, animal liberation, ecological direct action etc. In fact the sum total of all those involved peripherally over this period would probably run to over 100,000. Anyone who doubts this should note that despite most people who went to anti-road protests not being arrested there were 1,000+ arrests at Newbury alone! Similarly J18 was just below 10,000, while smaller RTSs have happened all over Britain. In the same period every weekend 'in the season' dozens of hunt sab groups were out in the field. At the turn of the '90s heyday of travelling tens of thousands were on the road at any given time. A high proportion of all those people would see themselves as anarchists.

"A security counter-action need cover no more than 5000 people... the total internment could easily be accommodated in a 'Gaelic Archipelago' off the West Highlands."—George Young, ex-Vice Chief of MI6 (Subversion and the British Riposte, 1984)

Counter-(R)evolution?—We should be so lucky (lucky, lucky, lucky)

In this section I have been talking about how we should prepare for a number of types of crises. I have not mentioned counter (r)evolution which I have largely dealt with in Task I: Growing Counter-Cultures. To many it may seem strange that I have separated 'preparing for crises' and 'preparing for counter-revolution'—surely a type of crisis?

My answer is that in this section I have been talking about what preparation our existing movement can make in anticipation of crises that are likely to be coming. On the other hand, discussions of counter-revolution presume a revolution worth countering—a class movement of vast scale. I have argued that in Western Europe only a significant working class counter-culture can seriously threaten the elite. That does not exist in Britain and no doubt is unlikely to in the immediate to medium term—if at all. In other words, preparations to defeat counter revolution could only be made by a movement as yet not in existence in anticipation of crises that without its existence are unlikely to come.

As I argued earlier in Task 1, only a combination of military disaffection and an armed people has any hope of successfully defeating a counter-(r)evolution—'winning' a civil war. I also argued that rebellions such as France in '68 will remain only temporary when they are not products of past struggles and a strong counter-culture that can not only propel a vision of the future but field considerable armed class strength.

Troops on the streets in the UK. Many don't think 'that sort of thing could happen here.' In fact, the UK has hosted one of the longest civil wars in history.

Task Conclusion: Don't Call Up Blood

It is worth here underlining the point that we should not look forward to these moments of cataclysm with relish. Anarchist history is brim-full with stories of social crises leading to uprisings which have in turn lead to the extermination of libertarians.

All powermongers are our foes and as a result anarchists have a tendency to get it in the neck. While harmony can be born of crisis, the child is more often horror.

However, an understanding that crises are likely in our lifetime shows that being in a sorted counter-culture rooted in the land yet with an ability to act in conflict is in our own interest.

Radical groupings are essentially gangs (see Camatte!) and gangs are what you need to survive and prosper in times of crises.★

I read that essay and was struck by its importance for us. Travel becomes ever cheaper. Less than 24 hours away on a coach is one of the nine most important terrestrial eco-regions on earth. Victories and defeats in this arena are of the utmost global importance. The same cannot be said of many of the places we have fought for in the last 10 years. As I said earlier, I do not mean to lessen the importance of those campaigns, and our many victories, only to point to the reality that they mean little when it comes to confronting global biological meltdown. For a whole host of reasons they should continue, but it's time for us to join other battles.

Looking at the map of the Med we can quickly come to some obvious basis for our action. Though there are conservationists in Morocco, Algeria, Tunisia, Turkey,¹⁰ Libya, Egypt, Jordan and Syria, there are no radical ecological groups to link up with. Israel is the only country in the Near East with a listed EF! contact. Ecological struggles are of course going on but are largely off our radar.¹¹ Work should be carried out to rectify this situation, but to be brutally honest I don't fancy doing direct action in Morocco much. Ask the Saharawians about it! We should support struggling communities and aid conservationists if and where we can in North Africa and the Near East—but let's face it we're not likely to very much. However, unlike other hotspots we can get stuck in to a large part of the area relatively easily. We have contacts in the European half of the Mediterranean hotspot and getting there is a cinch.

It is within this area that some of Europe's most militant ecological action has been taken. In fact at the time of writing there are eco-saboteurs serving time in Spain (for fucking up construction of the Itoiz Dam), Italy (for trashing a high speed rail construction site in the Sosa Valley) and Greece (attempting to bomb the Ministry of Industry in solidarity with communities fighting mega-port construction). The struggles these prisoners are part of are all being fought by anarchist/radical ecological groups our scene is in direct contact with, and there are many more.

Looking for allies lets take a trip around the European section of the basin anti-clockwise. We start with Greece. Much of it is a red alert area and has a sizeable and very militant anarchist scene with a slowly increasing green hue. Albania has no established radical ecological groups. There are smatterings of anarchos and radical eco-types throughout the ex-Yugoslav republics.

Italy's anarchists are pretty full on and increasingly engaged in some ecological resistance (The Italian-French Maritime Alps red alert area is relatively near Turin's anarchists and the area someone is in jail for defending). Southern France also has many active groups from GM trashing

Confederation Paysanne to anarchists, with the French Pyrenees being the site of the ten year resistance to the road through the Valle d'Aspe.

On the other side of the Pyrenees in Spain there are large anarchist groups and at present probably the biggest squatting movement in Europe. The Basque country (which borders the hotspot) has a history of mass struggles against mining, dams etc. with even ETA getting in on the act. The Spanish section of the Rif-Betique red alert area has become home for a sizeable British punk and crusty exile community. The Canaries red alert area (which despite being off Western Sahara is part of Spain) has a few environmental groups and like the Basque country has a (much smaller) nationalist movement with ecological tendencies.

Portugal has a number of together eco influenced anarchist groups and significant clashes continue between it's peasant past and the onslaught of modernity.

Over the last few years many of our circle have increasingly turned to the continent for adventure and action. The relatively low level of struggle in Britain since the end of the anti-road period, the rising [and now setting?] sun of the Spanish squatting scene, the strength of sterling, riot tourism, cheaper travel and the warmer climate of parts of Europe have all been factors. In the '90s the transient tribes of anti-road activists moved around Britain with little concern for distance. Now a similar situation is evolving for which the terrain is the whole of Europe.

This situation will expand significantly over the next decade. For while some of its causes have their origin in Britain's present,¹² others arise from the increasingly unified nature of Europe's planned future.

While this causes some problems for sustaining local organising in Britain it also opens up amazing opportunities.

Of the ten red alert areas, the ones nearest Mediterranean activist hubs are the Spanish section of the Rif-Betique, the Maritime Alps of the French/Italian border and southern/central Greece. Campaigns and targets in these areas should be relatively easy to find out about. *If we in Britain added our weight to our comrades in these countries and convinced other Northern Europeans to do so, we would be moving towards serious defence of a globally important area—making an actual impact on biological meltdown.*

Experience and contacts made through struggle in these 'easily accessible' three areas will chart the way forward towards action in other parts of the Med. A full scale migration is not needed. Some of our circle are planning to move to the Med's warmer climate. Many others are already wintering or taking small sojourns there. Significant contact has been made with groups in these

areas. All that is needed is that this pre-existing process be consciously and collectively shaped to the immediate goal at hand.

It is important in some areas to join local campaigns. In others, covert holiday sabotage is more in order. The latter is really just a call for the European adoption of one of North American EFl's longest running tactics—roving monkeywrenching. With the consolidation of the European super-state, travelling across borders to trek into and defend wildness seems ever more like crossing US states to defend wilderness. A practice, despite the distance, our North American friends think little of.

The Remaining 15 Hotspots

I am not going to go into much detail about the remaining hotspots; it would take too much space and be rather repetitive.

Of the 15, all but three are in the Majority World; countries at the moment largely out of our direct reach. As stated earlier, active ecologically minded groups in the hotspots should be given priority when it comes to support actions and funding. We do, in fact, have contacts in most of these areas. Some EFlers do conservation work

abroad and it would make sense that it is concentrated within the hotspots. If we can be of any practical help to efforts in these areas we should muck in wholeheartedly.

Three of the remaining 15 stand out, for us, if only because they're predominately English speaking and 'Western'—South West Australia, New Zealand and the Californian Floristic Province. In all three areas serious land battles are being fought and we have quite extensive contacts.

Aoterea: In Aoterea (New Zealand) there is a large indigenous resistance movement keyed into the PGA. There is also a sprinkling of anarchists and radical eco-types.

South West Australia: This region has a history of aboriginal land defence stretching from the invasion to the present day. The last three decades have also seen significant struggles by white radical environmentalists, defectors to the side of the indigenous and the land. When EFl first came to Britain, Australia was probably at the forefront of ecological resistance in the 'West'. Large-scale actions against the importation of tropical timber were carried out hand-in-hand with direct land defence. Over the last decade this scene has

Some (Don't) Like it Hot(spot)

While this section leans heavily on the hotspot theory, for good reasons, it is merely a system of global priority setting and thus should not become ideology. At base the very utility of such a project can be questioned—is global (rather than local) thinking possible or even desirable? Should our objectives be taken from cold, scientific number crunching? Unfortunately I think our time and geographic location force us to such analysis if we are to have an impact on biological meltdown. Other biological priority systems are out there but if we accept the need to go in this direction I reckon the hotspot theory offers the best route.

On a similar tack we should not see species diversity as a measure of the 'value' of specific ecologies. The basic tenant of biocentric thought is after all that wild nature has value in and of itself. The kind of discourse that leads to telling phrases like 'species richness' is poor substitute for a real connection with nature. In relation to Red Alert areas a true holistic/whole ecosystem approach is essential. There is after all little point protecting a habitat if, outside the protected area, the river that 'services' it is dammed or re-directed.

There is one deep worry I have about the hotspot theory—maybe it's simply too hopeful.

It concentrates on those highly diverse areas at imminent high risk of desolation. It's global > regional > local priorities are Hottest of the Hot >

Individual hotspots > Red Alert areas within the Hotspots.

By concentrating on those precious areas most at threat we are possibly concentrating our energy in those areas in which we are most likely to lose.

This is a dilemma worth pointing to because other strategies are available—though ones with more depressing conclusions. This then swings on one's calculation of the collective power that ecological direct action, conservation biology, enlightened bureaucrats (ha!) and popular movements can muster. I choose to believe that we can have some serious impact in the hotspots, but it would not be exactly illogical to think otherwise. Many of the Red Alert areas specifically and some of the hotspots in general are probably doomed. It might make more strategic sense to concentrate instead on the less devastated/domesticated areas (the big rainforest wildernesses not included in the hotspots) making links and preparing for battles to come. This 'Long War' strategy of concentrating on the 'cold spots' (Amazon, Congo, New Guinea) is attractive but it does take as a given that a vast % of global biodiversity is unsalvageable. I choose more hope than that—for now. A reappraisal of the situation should happen in maybe 10-15 years. If our trouble-making and conservationist money hasn't resulted in victory in at least some hotspots then a switch of strategy would seem in order.

Visualise Industrial Collapse

The above sub-header is an oft used North American EFl slogan. Ecologically this civilisation (unfortunately probably not civilisation itself) is doomed—maybe not today, maybe not tomorrow but within the lifetime of our children's children, our children or possibly even ourselves. We should not mourn for the death of this tyrannical, earth destroying culture but we should prepare for its end.

For the second time in this pamphlet I'm emphasising the need—in times of crisis, in times of stability—TO KNOW HOW TO FEED YOURSELF, YOUR FAMILY, FRIENDS AND COMRADES! We will not always be able to rely on the destruction and imperialism of industrial agribusiness to feed us like babies; nor should we.

George Bradford of the American anarchist magazine *Fifth Estate* is instructive in his essay 'We All Live In Bhopal'. In the aftermath of the 1984 chemical explosion in Bhopal in India (which killed, and continues to kill, thousands), the population fled:

"The New York Times quoted one man, who said, 'They are not believing the scientists or the state or anybody. They only want to save their lives... All the public has gone to the village.' the reporter explained that 'going to the village' is what Indians do when trouble comes. A wise and age old strategy for survival by which little communities always renewed themselves when bronze, iron and golden empires with clay feet fell to their ruin. But subsistence has been and is everywhere being destroyed, and with it, culture."

What are we to do when there is no village to go to?..."

"The corporate vampires are guilty of greed, plunder, murder, slavery, extermination and devastation. We should avoid any pangs of sentimentalism when the time comes for them to pay for their crimes against humanity and the natural world. But we will have to go beyond them, to ourselves: subsistence... We must find our way back to the village, or as the North American natives said, 'back to the blanket', and we must do this not by trying to save an industrial civilisation that is doomed, but in the renewal of life which must take place in the ruin."

Until recently people were adept at subsistence even in Britain—birth place of industry. For most people it is only a few generations that separate their fingers from the soil. One does not need to go back to the times of the peasantry to see this connection. On an allotment site anywhere in Britain you'll find elderly working class people who know both the satisfaction and the personal and political reasons for growing.

Subsistence skills can be learnt by us all, and passed on to our children. Non-industrial medicine must also be strengthened. In preparing for 'the collapse' we also build our autonomy and reconnect with living systems. There are few things more satisfying, and sensible, than sitting down to eat a meal grown by the combined powers of nature and one's own hands. Let us rebuild the generational connection with the land now. And as Bradford says, "Let us do so soon before we are crushed."

(Counter) Revolutionary Rainy Day Reads

It's raining outside and unusually you're not feeling particularly passionate. Hell, why not read up on state counter-insurgency strategy? When it comes to insurrection and revolutionary struggle the state is highly efficient at assessing and learning from its successes and defeats. Sadly, radical movements rarely are. In times of relative social peace we have the space to learn from the past. If we ever need the lessons in the future we are unlikely to be able to do the reading. As well as studying 'our own' histories it is highly useful to read the 'other side's' view of things—not the propaganda it gives the people but the analyses it gives its own armies. Some of them are publicly available if you look for them and unlike the 'pie in the sky' rubbish radicals can come out with, they are useful, relatively undogmatic analyses of confrontations of strategy.

The first book worth reading is without a doubt the one from which this section's front page quote is from: *Low Intensity Operations: Subversion, Insurgency and Peacekeeping* by Frank Kitson, ISBN 0571161812. Anyone who jokingly might think themselves a revolutionary should read this book—without a doubt a Machiavellian masterpiece. Kitson's career culminated in being the top bod in the British land army and along the way he helped screw insurrections in Kenya, Malaysia, Oman, Cyprus and most famously of all, Northern Ireland. Written at the beginning of the '70s, *Low Intensity Operations* has remained hugely influential, especially in the British and American military. In the words of the author's 1991 Preface it was written: "primarily to prepare the army to play a part in countering subversion and insurgency...". While a tad dated, as a practical how-to book on snuffing out subversion it should be read by us all.

A good introductory (though non-specialist and therefore less useful) is *Ragged War: The Story of Unconventional and Counter-Revolutionary Warfare* by Leroy Thompson, ISBN 185409369X. Its author has a decent pedigree from a USAF Ranger-trained special missions unit and seems to have spent most of the last three decades training some real oppressive scumfucks. Being recently published this is by nature far more contemporary. *The Art of Counter-Revolutionary War* by Lt. Col. John J. McCuen, (ex-US Army General Staff)

was published in 1972 and thus like *Low Intensity Operations* is heavily dated but well worth reading; not least for its vast and bi-partisan bibliographies.

While much of these books concentrate (understandably) on countering predominantly rural guerrilla warfare, to ignore urban counter-insurgency strategy would be a serious mistake. Northern Ireland is the classic Western case and radicals should devour anything they can find about it. The best available I'd say is *The Military Strategy of the Irish Republican Movement* by MLR Smith (Lecturer at Greenwich Military College), ISBN 0415091616.

The only serious attempt to breach this subject by British anarchists is the wonderful—but now very dated—*Towards A Citizens Militia* by Cienfuegos Press, ISBN 0904564339. It's a good introductory guide to principles of armed resistance, organisation and conduct of guerrilla warfare, the tactics of security forces, and the organisation and operation of civilian resistance movements. It's written by Stuart Christie, an Orkney-based anarchist who put his money where his mouth was—among other things famously attempting to assassinate Franco. It's practical, and at 28 A4 pages, quite concise. If you read any book in this selection read this one. Beware though—state technologies have advanced a lot in the last twenty years!

After a rainy day in with that lot you should be able to join the swelling ranks of counter-insurgency warfare trainspotters.

Mock village on the Dungeness peninsula in Kent which was constructed for realistic military training in Northern Ireland and urban areas.

Redwood Summer logging road blockade.

shrunk but is still never the less both active and pregnant with great possibility. Australians have been responsible for some of the largest summit actions of the Global Resistance Period. It has the normal assortment of anarchists—many being very eco in word and deed.

For obvious reasons there is a reasonable amount of three way traffic between Britain, Australia and New Zealand. While these areas are not as important or threatened as some other hotspots higher up the global diversity/threat hierarchy, for cultural reasons it is simply more likely that links will continue and consolidate with these areas.

Californian Floristic Province: This hotspot is probably the one we have historically had most ties with. Though the latter '90s have seen an increasing turn towards 'Europe', in the early '90s British EF! orientated itself primarily with reference to North American EF! By the time of the birth of our movement EF! had internationalised, yet it was still very much a North American export. For this reason I will go into more detail about the only hotspot found predominantly in North America.

The Californian Floristic Province stretches along the western coast of North America, most of it within the state of California. However, it also extends north into Oregon and south into Baja California, Mexico.

Approximately 60% of California's land is included within the floristic province. The total number of plant species present is greater than that for central and northern US and the adjacent portion of Canada, an area almost ten times as large.¹³

This rich biodiversity is seriously threatened. California is the most populous of the United States, its economy ranks among those of the world's top seven countries and it produces half of the food the US consumes. Among the main threats faced by this hotspot are urbanisation, air pollution, expansion of large scale agriculture, livestock grazing, logging, strip mining, oil extraction, road building, the spread of non-native plants, an increasing use of off-road vehicles and the suppressing of natural fires necessary for reproduction of key plant species.¹⁴

In defending this region against attacks North American EF! has had some of its most memorable moments. The massive Redwood Summer campaign which led to the carbombings of EF!ers Judi Bari and Daryl Cherney. The amazing direct action victory at Warner Creek, the killing of EF!er David Chain by a logger from Pacific Lumber. Two Eugene radical eco-anarchists are serving long sentences in the region for arson attacks on an off-road vehicle showroom.

In the early '90s we did quite a few solidarity actions for our North American friends. More recently most have been for Majority World groups. Those actions should continue but we should not neglect supporting North American EF!, especially in its struggle over this immensely important hotspot. Apart from the Mediterranean Basin, this hotspot is the one people from our circles visit more than any other. Big wilderness, cheap flights and an impressive (English speaking) movement will continue to be a pull for many. What we can offer those defending this hotspot is regular communication, occasional solidarity actions and itinerant Brits. Well, it's better than a bag of beans.

Defending the Land: Medium Term Global Objectives

Here, I am attempting to set, using the hotspot theory and an understanding of our strengths, a hierarchy of our top global *biological* objectives for the next ten years.

In many ways this seems ridiculous. However, in 1992 we set ourselves the task of stopping 600 roads which were ripping through a significant proportion of Britain's most important habitats. Within five years 500 had been cancelled. I am confident that unified action can have a momentous effect. Those who believe less than I in our cumulative power should see the utility of strategising all the more clearly. Here then is what I think our top global objectives should be, in order of their importance to us.

1) Get Militant in the Med: A big push is needed to directly defend the Mediterranean Basin Hotspot. It is the only one of the 'top 9' found in the 'West' and the only hotspot to include part of Europe. Over the next few years we should consolidate links with Basin groups and start to engage directly in action within it. The Med's 10 'red alert areas' are of greatest importance. Of these the Maritime Alps, the Spanish section of the Rif-Betique and Southern and Central Greece should be our first concern. Involvement in resistance in these areas should build our ability to engage and support struggle elsewhere in the northern part of the hotspot. Within a relatively short period of time we could be involved in serious defence of a globally important area—making an actual impact on biological meltdown.

2) Uncompromising Aid for the Three Most Threatened Hotspots: The Philippines, Madagascar and the Caribbean are the priorities at the moment, yet as we are unlikely to actually get to them they are not our highest objective. However we should target solidarity and aid to radicals, resisters and conservationists in these three hotspots as a matter of urgency. Of the three it is with the Philippines that we have most extensive links—these should be consolidated. Filipino EFlers and anarchists should be given substantial aid. [Since this was first distributed EFlers from Leeds have formed the 'Philippine Solidarity Group', providing practical aid for EFl and indigenous groups there. This has included direct financial aid, on-the-ground solidarity, prisoner support etc.]

3) Go Wild for the 'Western' Hotspots: For various cultural and economic reasons our direct involvement with struggles is more likely in 'Western' countries than Majority World ones. The areas under occupation by the 'West' largely do not appear in the hotspot list. Apart from the Med and a small part of the Caribbean, those that do

are South Western Australia, New Zealand and the Californian Floristic Province. Already existing links should be solidified, solidarity actions carried out and the steady flow of our visitors to these hotspots should continue. Just remember to wrench at least one big machine for each long-haul flight!

Beyond this we should do anything we can to assist the preservation of all hotspots, not just those mentioned above. Wild areas not included in the hotspots should of course also be defended. However if we want to have any meaningful impact on biological meltdown, as much of our activity as possible should be aimed at the hotspots in general and the above objectives in particular.

Back to Britain, Back to Reality

So far I have charted what I believe we should do on the global terrain. Yet most of what we have done over the last decade has been defending the land of these dear isles. I am not calling for abandonment of this struggle. It is important for both us and the ecology of Britain. It is also what we have shown ourselves to be pretty good at. Hundreds of habitats remain living due to ecological direct action. Kiss the earth and feel proud. We—among many—have done well.

Though many of us will take action in the global hotspots, few will spend most of our time there. One criticism of following a hotspot based global triage strategy is that it lacks soul. Species diversity surveys do not an ecological sensibility make! While that's true, the global crisis calls for *globally* important action and I believe that the hotspot theory has utility. Yet acceptance of the *globally* peripheral nature of British habitat defence does not extinguish our desire or duty to defend *our* land. An authentic land ethic must be rooted in where we are. My bioregion may be 'species poor' compared to a rainforest but I love it. It's the bracing wind on its bright hills that whisper to me to live wilder. On a totally practical level it's far easier to defend land nearby.

Hope for the Best—Prepare For the Worst

Once again this is where I depart from what I've earlier called the 'It'll be all right on the night' tendency. Two factors that are likely to in part decide what happens in a crisis are:

1) How well known are anti-authoritarian ideas?

In crises peoples perception of the possible widens. Ideas, which under normal circumstances are rejected out of hand, in moments of crises can be judged and seen to be sensible. However, they can only be judged if they have been put forward in the past. Thus anti-authoritarian educational work to the non-aligned⁴ majority today, can influence decisions over aims and forms of organisation they make in crises tomorrow.

2) How experienced and organised libertarian groups are.

In any crises in British society today the main course of events will primarily be determined by the elite and the previously non-aligned. However, history has shown that relatively small groups can have a decisive effect in moments of crises. Spain in the 1920s and 1936, Northern Ireland, the Ukraine in 1919 and the French resistance provide some examples.

I am *not* advocating organising an armed vanguard force to lead the people to revolution in times of crisis. I'll leave these ridiculous notions to the Leninists. I am saying that as groups which understand what might be coming and have the ability in part to affect it we have a duty to intervene in times of crises. It's our role as anarchists to stop authoritarian organisations—right wing or left wing—gaining ground in times of crisis. Or at least attempt to do so.

If a group is to have any effect it must:

- Have an intimate knowledge of its local area.
- Have a range of basic skills and resources available from those needed for fighting to medicine, printing and the use of communication equipment.
- Consist of members who through previous struggle have pushed back their fear barriers and extended their creative operational vision of the possible.
- Have an understanding of what actions authoritarian organisations are likely to carry out in moments of crisis.
- Have a number of members entirely unknown to the state as 'subversives'.

Some advice from an Orkney anarchist—
"Cover main road block with automatic fire.
Block secondary routes and mine or booby-trap these." 'Revolutionaries' too often don't think about the practicalities of insurrection, never mind prepare for it.

Thankfully, actions taken under other areas of strategy from Thumb in the Dam struggles to the growing of a combative counter-culture prepare us in part for what might need to be done in crises. The experience 'affinity groups' get in the present from involvement in mass actions, anti-GM sabotage, strikes, hunt sabbing, monkeywrenching, animal liberation, pirate radio, general criminality and anti-fascist activity are all useful training for the unexpected future.

The anarchist scene in Britain is growing but it's still a small shoal in a sea of sixty million fishes. Nevertheless it's easy to underestimate our ability to intervene in a crisis by concentrating on our present number of 'activists'. In fact one consistent aspect of crises is that when the barricades go up many 'ex-activists/militants' come out of 'retirement'.

Thanks to dole cheques and the low level of generalised class struggle the British radical ecological and libertarian scenes have existed as 'alternative youth cultures'. These cultures have encapsulated the lives of tens upon tens of thousands of people over the last three decades.⁵ By their very nature youth cultures are cultures of the young, and when the young get older they usually leave. However, I believe that most of those who have 'left', 'dropped out of politics', 'got disillusioned', 'burnt out', etc. rejected not the principles of anarchism but the practice of activism. In times of social crises those who got off the hamster wheel will know that action is not only with purpose but in their interest. Those who have once stood up are likely to stand again.

Listen hard—you can hear the crash before the impact.

The Flesh in Crisis

The mass nature of industrialism—a society evolved to consolidate oppressor order—itself produces mass ‘personal’ disorders in the oppressed. Incremental changes in mental and physical health can seem trivial until a threshold is reached. Under certain circumstances these personal disorders can seriously re-order civilisation.³

With herd medicine and transport systems turning humanity ever more into a mono-culture, we can expect future epidemics to reap an unparalleled harvest of heads. In the mean time a divided society will continue to create divisions, not just between people but within people. Despite the glossy charade, such a fractured society is always on the edge of implosion. As in the past, it is just

a matter of time and chance how soon it will be before the personal becomes political in a cataclysmic fashion.

Crisis Breeds Change

For all the reasons stated above it is highly likely that British society will be hit by serious crises within our lifetime. Any movement that does not take this into consideration is unlikely to survive. Crises by their very nature contain truckloads of both danger and possibility. Crises are moments of the extreme and when the shit hits the fan people look for extreme solutions.

Times of sudden (r)evolutionary possibility often arise out of war, chaos and social collapse. The period after both world wars saw massive revolutionary waves. The First World War brought us the Russian revolution as well as workers and peasant uprisings across much of Europe. The Second World War seriously damaged much of the social fabric of empire leading the way to insurgencies across the Third World. In turn the horror of the Vietnam War opened up fault lines across American society.

While insurrections have often arisen out of crises, crises may not be fertile ground for harmonious social (r)evolution. Though people look for extreme solutions, there are no ‘pre-ordained’ reasons why they will turn to anarchist ideas rather than authoritarian ones. In fact libertarian tendencies in the people are likely to be heavily curtailed when confronted with the interwebbed complexity of industrial society, peoples alienation from their own food and the scale of modern warfare.

“Read no more odes my son, read timetables: they’re to the point. And roll the sea charts out before it’s too late. Be watchful, do not sing, for once again the day is clearly coming when they will brand refusers on the chest and nail up lists of names on people’s doors. Learn how to go unknown, learn more than me: To change your face, your documents, your country.

*Become adept at every petty treason,
The sly escape each day and any season.
For lighting fires encyclicals are good:
And the defenceless can always put to use,
As butter wrappers, party manifestos,
Anger and persistence will be required
To blow into the lungs of power the dust
Choking, insidious, ground out by those who,
Storing experience, stay scrupulous: by you.”*

—Hans Magnus Enzenburger

As I said earlier in Part One, throughout the 1993-1998 Land Struggle Period our action priorities were largely set by the Department of Transport. When we decimated the state road building program we lost a terrain of struggle that unified and strengthened us nationally. The question posed, then, is what is the greatest and most geographically spread threat to British ecology?

The tactically unfortunate answer is industrial agriculture.¹⁵ The ‘great’ thing about road building was that wherever you were in the country it produced a front to attack, land to defend. It bit into Britain’s ecology in big bites. The terrible thing about industrial agriculture is that though it devours more, it does so incrementally, with small bites. Fronts rarely present themselves. The camps at Offham,¹⁶ The Land is Ours occupations and trespasses,¹⁷ and most of all the growth of anti-GM actions, are all in part attempts to bypass this impasse.

The post 1998 wave of global resistance allowed us to totally side step the question of what land to defend (of course, some camps continued but little on the previous scale). Now we are faced once again with this question. Essentially without a national programme to attack, the question divides further—at least from the perspective of strategy. There are three categories of British land habitat defence to take into consideration:

1. Bio-regional Habitat Defence. Specific local sites under threat that may not be perceived as either ecologically or strategically national priorities should none the less be defended by local groups.
2. National Co-ordinated Habitat Defence. Land deemed ecologically or strategically¹⁸ of prime national importance, which the movement as a whole can recognise and act on.
3. Defence of the Wild Periphery. Areas beyond the bioregions of any local groups and far from large

The Tory road building programme provided obvious national focus. The campaign against the Newbury bypass was a battle in which people from all over Britain took part.

population centres that have some character of wilderness about them.

With roads, local bio-regional habitat defence fed into national co-ordinated habitat defence. Any terrains which mirror this hugely advantageous situation should be pursued. At the moment I can see no such terrain, but let’s keep a look out! I’ll go through each category in order with some suggestions.

Bio-regional Habitat Defence: Essentially this is a question for us as individuals, groups and hopefully eventually as local counter-cultures. We should be intimately aware of the ecologies around us. Only through a deep knowledge of, and connection with the land can we hope to defend our bio-regions from further damage. Looking at local biodiversity studies¹⁹ is worthwhile, but it is our feet across the landscape that is most informative. Get out into the countryside around you. Make sure you are familiar with the wildness on your doorstep. Know your land and you’ll know when it’s threatened.

Put yourself about in peculiar circles. Conservationists, twitchers, ramblers, insect lovers; in most areas there are a smattering of nature nerds. If you’re not one, make sure you’re friends with some. They’ll know about the housing development that’ll destroy ancient woodland or the farmer who’s draining some amphibian rich marshland for subsidies. Keep your ear to the ground.

Many of our most important habitats are listed as Sites of Special Scientific Interest. SSSIs are Britain’s ecological backbone, but nevertheless are often threatened. Make sure to keep an eye on the ones nearby.

I am not going to go into detail about what tactics are needed in local battles. After 10 years it’s pretty obvious. Community mobilising, occupations, blockades, bulldozer pledges, sabotage. Threatening the destroyers with costly chaos and giving it to them if they try it on.

Nationally Co-ordinated Habitat Defence: Since Newbury/Manchester there hasn’t been a piece of land that we have all pulled together to defend. This has been a great shame. Together we are quite a force/farce to be reckoned with. National co-ordination has some real advantages. For a start it maintains our circle’s bad reputation, which is invaluable. Countless sites have been saved with just the threat of camps and direct action. However, significant and loud struggles are needed to keep this threat potential alive.

Beyond tactical considerations, some ecosystems are simply so precious they call upon us all to cram into crummy vans, meet joyously in the mud and fuck shit up. Above all else, these moments can be bonding, inspiring and educational (when they don’t go horribly wrong).

Many targets such as the Hillgrove cat breeding farm were forced to close in a cycle of success for animal liberationists. The cycle only came to a close when the state put its full financial backing behind Huntingdon Life Sciences.

When deciding whether a particular piece of land should be coalesced around nationally, a few questions should be asked. Is it highly ecologically important? Is it winnable? Is it easily accessible nationally? Is the actual physical terrain conducive to action? Will a victory or noisy defeat on this land help save habitats elsewhere?

Mid to late 2001 saw the re-emergence of direct action in defence of the Thorne & Hatfield raised peat bogs. To all the above questions this habitat answers with an enthusiastic YES! At the risk of seeming foolish from the perspective of a few years hence, I believe this campaign to be immensely important. Not only does its re-emergence allow us to co-ordinate nationally but direct victory is quite conceivable. [Since this text was first distributed the campaign escalated and secured the end of peat extraction on Thorne & Hatfield and other sites. See the article in this issue for more details.]

Reform environmentalism has spectacularly failed to save this hugely ecologically precious habitat. If we win this battle and choose our next equally well we could end up in a cycle of success. One noisy victory leads to another and many quiet ones besides.

A recent good example of such a cycle is when animal rights groups got on a roll after closing

down Consort, who bred dogs for vivisection.²⁰ Once they had shown their mettle by closing Consort they followed up by forcing closed Hillgrove (cat breeders) and Shamrock Farm (a monkey quarantine centre). By the time the cycle reached Regal (rabbit breeders), the owners were so freaked that they packed up the day after the campaign was launched!

These successes understandably led animal liberationists to become too cocky too quickly and take on a much bigger target—Huntingdon Life Sciences. HLS is integral to corporate Britain. The state saw the danger of animal liberationists on a roll and realised that if HLS was brought down the 'animal rights extremists' would feel unstoppable. Smaller companies would crumble at the sound of their approach. Thanks in large part to the targeting of its financial backers things were getting economically dicey for HLS. The state reacted and stabilised the company by arranging a large injection of capital. From then on HLS has acted as a firebreak, stopping the spread of animal liberation. The cycle may have been broken. The teeth of this trap should not be allowed to cut into resistance again.

A comprehensive analysis of national land defence priorities is too big a job for this piece. Such a study must take place. For the moment we

The Myth of Stability

The myth is that though we may see crisis on the TV in other countries, Western Europe will be forever stable. This is an idea that our generation holds; other living generations are not so ahistorical—they, after all, have lived through history.

Our grandparents experienced the Second World War and all of its horrors and the cold war partition of Europe. Many of our parents were teenagers during the fall of the Spanish and Portuguese fascist regimes in the '70s, the rise and fall of the CIA-backed military coup in Greece, the May '68 revolt in France and serious social conflict in Italy in the '70s, to name but a few of Western Europe's recent crises. Not to mention internment of radicals, soldiers on the streets for nearly thirty years, bombings and guerrilla warfare in Northern Ireland.

For those who think 'that sort of thing couldn't happen here' it's worth remembering that Britain came perilously close in 1968-75 to a military coup spearheaded by leading industrialists, high ranking army officers and members of the secret services.¹

Social crises are regular occurrences in societies based on class warfare.

The Living Earth in Crisis

The crises we've known are likely to look pretty minor compared to what's on the horizon. Climate change and biological meltdown are already kicking off serious crises, killing hundreds of thousands and the ride hasn't even got going yet. The extremes of ecological instability are most visible at the ecological extremes—the Tropical, Arctic and Antarctic zones. However the evolving global crises WILL reach us in the Temperate zone. Things are gonna go a bit fucking weird. There is no way out

of it; the ecological effects of yesterday's industry have already decided the ecological instability of tomorrow.

If the climate and life support systems of the earth destabilise, you can guarantee that society will also.

The Megamachine in Crisis

Economic crisis, though connected to crises arising from class struggle and ecological destabilisation, are capable of creating chaos in their own right. In the last five years of the twentieth century a wave of economic crises crashed whole economies; Albania, Russia, the Asian Tiger countries. In a globalised system the collapse of one economy can create a domino effect. For those assimilated into these fragile economies living standards get worse. Many people simply cannot afford to let things continue as they are.

The Indonesian uprising which ousted Suharto and the 1997 insurrection in Albania² show what happens to regimes when their economies collapse. So, unfortunately, does the depression era rise of the Nazis.

Thanks to heavy economic manoeuvring West European societies have not experienced the destabilisation that has swept East Asia and the Second World in the last decade. Their economies are inherently less robust than those of the core capitalist countries, but that does not mean that the core capitalist countries are 'untouchable'.

III

Preparing for Crises

We must have the ability to defend ourselves, survive, and exploit crises in society including capitalist attempts to destroy us. The divided and industrial nature of today's society has already determined the instability of tomorrow.

"It is difficult for the British with their tradition of stability to imagine disorders arising beyond the powers of the police to handle, but already there are indications that such a situation could arise, and this at a time of apparently unrivalled affluence..."

"If a genuine and serious grievance arose, such as might result from a significant drop in the standard of living, all those who now dissipate their protest over a wide variety of causes might concentrate their efforts and produce a situation which was beyond the power of the police to handle. Should this happen the army would be required to restore the position rapidly. Fumbling at this juncture might have grave consequences even to the extent of undermining confidence in the whole system of government."

—General Sir Frank Kitson, ex-Commander-in-Chief of UK Land Forces.

**"Imagine having no running water to drink.
Chemicals contaminate the pipes leading to your sink.
Just think, if the grocery stores close their doors,
And they saturate the streets with tanks and start
martial law.**

**Would you be ready for civil war?"
—dead prez.**

Wild areas far from activist hubs should not be ignored. Habitats such as the Caledon forest remnants in the Cairngorms deserve our uncompromising defence.

can concentrate on the peat bogs, but we should not wait till victory to map out our next targets. It is around our ability to act nationally that our network survival (rather than just that of our local groups) rests. Previous waves of national action have been defeated by either our victory in a particular battle (i.e. roads) or the pig's success in swamping us (i.e. Sea Empress, Target Tarmac etc). Hopefully this time we'll get the wagon rolling fast enough that it can't be stopped—at least for a while!!!

One priority that can definitely be set is confronting corporations in the National Parks. As long as they succeed in one development, one quarry, one pipeline, the vampires will push on with another attack. It should be our job to make them scared enough to retreat—at least out of *some* of the National Parks.

The National Parks are immensely important and the hold they have over popular imagination makes them easier to organise around than other areas. It is also often easier to find out about threats facing the Parks. If the companies are given an inch they'll take a mile, but if their profits are threatened they'll run a mile.

The present Nine Ladies action camp in the Peak District National Park stands a fair chance of success, has strengthened the resolve of local conservationists and is deterring other destructive projects.

Defence of the Wild Periphery: Our movement for the wild has evolved in a physical and political environment lacking big wilderness. Habitats near large human population centres are more likely to be defended by us than wilder and more precious ecosystems far from the cities. Wilderness is everywhere from the grass between the paving slabs to the high mountains. It's good that we defend wild pockets in deserts of development (the M11, Abbey Pond, Crystal Palace etc.)—primarily for such struggles' (r)evolutionary potential—but we should not ignore 'the mountains' altogether. So far this has largely been the case.

With the exception of some good work in North Wales, the stillborn (but dramatic) campaign against the Skye Bridge and the victorious defence of the Pressmenan Woods Caledon remnant, defence of the wild periphery has been pretty paltry.

An example of our failures can be found in the Cairngorms—one of Britain's largest roadless areas. For at least 8 years I remember occasional campfire/pub chat about the possible construction of a funicular railway up Cairngorm. It's been very contentious as the train replacing the ageing chairlift (itself an aberration) will massively increase the amount of people on the Cairngorm Plateau (1,000 a day is a figure bandied about). With them we knew would come much damage and significant building work, shops and all. Plans are

even being discussed for hotels! This isn't fucking Mayfair—it's the summit plateau of one the wildest areas in Britain. Many said that direct action should be used if construction started. The project was put on hold at one point and I for one presumed it had been cancelled.

Yet no one kept their ear to the ground or acted if they knew. The first I heard about the railway being actually built was Autumn 2001 and on January 1st 2002 the first public train ride up Cairngorm was broadcast across the nation. A carriage filled with smiling politicians toasting the New Year—pass the sick bag (No wonder they were smiling—there was no way the parasitic slob could have got up the mountain in January if they had had to walk it. That would have made far more amusing TV). The glint in their eyes was the reflection of our failure. If one of the last British bastions of wildness can become a site for development, what chance have we got of re-wilding London or Liverpool!

In the Cairngorms 10% of the area below the treeline is still covered by native woodlands and is the "most extensive example of Boreal forest in the UK and one of the largest tracts of comparatively unmanaged and still mainly unenclosed woodland."²¹ If we have failed to defend the wildness of the Cairngorms Plateau it is essential we protect these remnants of Caledonia and other sites like them. Though a significant proportion of the massif is now under conservation ownership, a lot of damaging economic/ecocidal activity continues. If anywhere calls for some occasional monkeywrenching, it's these wildlands.

I use this example because it's horrific and it's in Scotland. If protecting SSSIs and the like is of primary national importance it is worth pointing to one simple fact: 20 % of the total area of Scotland is designated either an SSSI, National Nature Reserve, or National Scenic Area. Scotland's total species diversity is far less than England's but its habitats are far less fragmented.

"We have species and habitats in Scotland that are important, in both the national and international context. Examples are the native pinewoods, the extensive blanket bogs, the bryophyte-rich Atlantic woodlands and the enormous colonies of breeding seabirds"²²

These areas should be militantly defended. Yet apart from the exceptional actions of some communities, few stand up to defend these wild areas from the threats of plantations, logging, development etc. In large part this is because of the absence of people in much of the Scottish countryside—excluded by one of the highest concentrations of land ownership anywhere in the world. Given this, it is all our responsibility to protect these areas. If not you, who? In the long run it would be good to formulate ways of

confronting this destruction in a co-ordinated fashion. Until then, happy hikers with wrenches in their backpacks have an important role to play.

Unfortunately what makes Scottish bio-diversity globally unique—its climate edge position resulting in an amazing coexistence of species from different ecologies—is itself under threat from climate change. This should not dissuade us from action but remind us all the more of the need in times of flux for massive wilderness restoration; and situate our *local* British struggles in the *global* context. As one contributor at a conference on biodiversity in Scotland put it:

"Our Scottish action on biodiversity is in danger of being reduced to trivial tinkering on the margin: another example of deckchair-shifting on the Titanic."²³

As in Scotland, so it is across the divided queendom—many habitats main protection lies in their remoteness and the efforts of an array of often relatively powerless conservationists. Not even on this domesticated isle has the wild been vanquished, but it is under threat. I'm not going to specify the areas in need of special defence—across the wild periphery diversity is being whittled away. We are a people in love with the wild. We are committed to the wild—to its power and its defence. By spending more time 'out in it', we will better know which areas are threatened and gain the inspiration to take the action needed.

Many tens of thousands desire these areas, finding solace and strength in them. One of Newbury's greatest moments was when the state's use of climbers catalysed the involvement of many from the climbing fraternity. Those who took the state's silver were seen by other climbers for what they truly were—scabs, traitors to the land. A leading climbing magazine stated that what Britain's wild areas really need is a monkeywrench

Through walking the wildlands we become more able to defend them and unite with others who hold them in their hearts.

Notes

- From Harrison Ford's (!) intro to: *Hotspots: Earth's Biologically Richest and Most Endangered Terrestrial Ecosystems* by Russel A. Mittermeier, Norman Myers and Christina Goettsch, ISBN 9686397582
- Conservation Biology* by ME Soule and Bruce A. Wilcox, Eds., p. 166
- 'The Chartist Anthem', in *The Jolly Machine: Songs of Industrial Protest and Social Discontent From the West Midlands* by M. Raven.
- Hotspots*, p. 37
- Ibid.* A number of the hugely important major tropical wildernesses are not presently included in the hotspot list They are Amazonia, the Congolian Forest Block of Central Africa, New Guinea (i.e. West Papua and PNG), the Melanesian Islands—New Britain, New Ireland, Northern Solomons (i.e. Bougainville and Buka), Solomon Islands and Vanuatu. These areas are all under some level of attack—some heavy—but they all retain over 25% of their original area untrashed. The team that wrote *Hotspots* are in the process of writing a report on these areas. While they need defence, from the perspective of *global* triage they are not *presently* areas of highest *global* priority. Of course if industrialism continues for much longer these areas will almost definitely join the global habitat 'red list'.
- While the Philippines does not appear in the overall 'top 9' list; when looking at plant endemism alone it is ranked ninth highest of all the hotspots.
- Caribbean Environment Watch produce a useful newsletter: CEW, 141 Coldershaw Road, Ealing, London, W13 9DU.
- Cubans grew one of the largest anarcho-syndicalist movements in the world. Though its height was in the 1920s it was still a significant force when Castro rose to power. Armed resistance to the communist counter-revolution ended in jail for well over 100 anarchists. Many companeras were killed and hundreds more went into exile.
- Important issues must be faced when supporting mainstream conservation programs in the Majority World which too often just shit on local people. Though conservation fiefdoms are in many ways just another form of colonialism they may still be the best hope for some species survival through this century. A prickly reality. It matters little to a bear how oppressed its killer is and the sap still spurts whether the tree is cut with the axe of a peasant or the chainsaw of a company logger. In the war between humanity and nature, I side with the bears. Nevertheless multinational conservation organisations awash with money make questionable allies!
- As well as mainstream conservationists some Turkish anarchists have recently done anti-GM actions—hopefully an indication of the greening of that scene.
- This is for many reasons—not least of which relates to language and Britain's colonial past. It is no surprise that many of the majority world groups we Brits have linked up with have been in ex-British colonies and/or Christianised countries. We need to go beyond this and forge links across these divides. So for some of the countries in the Med the kind of work needed for most other hotspots is called for. It is likely that groups in Spain, Italy etc. will be able to connect us up to groups in these areas better. For example, French anarchists, for reasons connected to their own country's colonial past, are much more aware of the 2001 Berber uprising in Algeria than British activists.
- The desire to escape the boredom of much of our present activism. The state repression of travellers. The squeezing of dole autonomy. High land prices and repressive planning law.

- See 'Victory at Offham', *Do or Die* No. 6, p. 62
- See 'South Downs Mass Trespasses '98: Notes on Packed Lunches and Revolution', Anon., South Downs EFi
- Ecological and strategical importance are fundamentally different. Strategical importance relates to us, our abilities and what effect action at a specific site will have on our growth or collective power. Ecological importance relates to the intrinsic value of sites irrespective of our ability to defend them.
- At the Rio Earth Summit nonsense in 1992, governments said they would catalogue their countries' biodiversity. The card-filers

of the apocalypse have been busy and you can check out their handy work on the UK Biodiversity Website: www.ukbap.org.uk The website is being added to constantly and you can search it for particular habitat types nationally or locally, or look at biodiversity in your county generally. Some of the website is very useful, other parts blather.

- The move into a cycle of large-scale daytime national mobilisations was a significant shift in strategy for animal libbers—catalysed by the unexpected mass explosion of the live export protests (See 'Shoreham: Live Exports and Community Defence', *Do or Die* No. 5, p. 75). After the significant victories of the '80s against vivisection and fur farming animal libbers looked to escalate action against the largest cause of animal suffering in Britain. Their target—industrial agriculture. Their action against the meat/dairy industry—a vast target to say the least—though dramatic (just look at those meat trucks burn!) was a failure. Few animals were saved and the *entirely* covert nature of the activity seriously cut into 'recruitment' and 'outreach'. Industrial agriculture is just too big a target. Ironically the live export resistance opened a way out of this impasse.

EF! groups. The importance of any action on this field cannot be overstated.

Any involvement by our circles with the Agta would act as a jumping board, extending experience and contacts—thus enabling similar work elsewhere. [In January of 2003 four Leeds EF!ers went over to the Philippines with the express purpose of helping at Dipuntian and working with EF! Philippines. Meanwhile quite a few in the movement had pulled together around the inspirational sounding project and raised the needed funds for the second land purchase—through a mix of benefit gigs, beer selling, personal donations and grants. Unfortunately Dipuntian was definitely different than is publicity stated. As the EF!ers said on return; “For the past year, much of SSP’s work on the Philippines has centred around the FPCN project at Dipuntian... We provided publicity and volunteers, and secured funding to buy more land for the project. Having now visited and worked on the project we have made the decision to withdraw our support for it.” While this was very disappointing, to say the least, the visit was by no means a waste of time. Not only did the ‘fact finding mission’ uncover some, unfortunately, facts—it also forged links with Agta bands elsewhere and tribes throughout the islands, as well as supporting Filipino EF!ers. The Leeds visit achieved a number of decent things itself and has opened up the way to further, targeted action. More info can be found on continuing work and the problems involved on : www.eco-action.org/ssp.]

Task Conclusion: Warriors for the Earth

To the land of these Isles most of us will return one day—dying, rotting, giving life. Until then, the wind and soil in our soul should direct us. When our leaps halt machines, our scythes cut through experiments, our wrenches disable diggers and our matches start fires—we are the land.

Though we love this land, we love this entire earth and thus the *global* crisis calls us ‘over the water’. In the biological/cultural meltdown Britain’s diversity is marginal. To confront the meltdown we will need to join the battle to defend the earth’s last big wildernesses—on land and at sea. However, many of us will be unable to reach these global ecological frontlines and will have to fight to preserve fragments behind enemy lines. Above all else, the wild areas in the Mediterranean call us.

To slow cultural meltdown, the last remaining wild peoples must be aided in every way. If most of our species are ever to break out of this nightmare

3) Reconnect with Young Lions EF!: Six years ago Young Lions EF! (South Africa) were aiding the San Bushman, setting up ‘bush skill’ training camps where elders taught the old knowledge to ‘assimilated’ San. The last we heard from them they were planning to smuggle a considerable number of San back into the Kalahari desert from which they had been expelled. We have heard nothing since despite some attempts at contact. YLEF! were an exceptional group, we must hope they’re alright. Serious attempts should be made to find out what happened and aid them if they are still active.

4)Continue to Build Indigenous Solidarity Work: Those struggling indigenous peoples we have aided so far (Ogoni, Ijaw, Papuan, Bougainvillian, Zapatista etc.) deserve our support. This will involve a lot of activity, but we are well on our way. A detailed look at what is needed can be found in Task IV. The last wild peoples call us ‘over the water’. I know some of us will answer them, yet we must be very careful not to cause damage with our good intentions—‘Mosquito Coast’ style. These are incredibly delicate situations. Tribal people already have a plague of ‘do gooders’, what they need is allies. “Most tribes have no voice. They need people like us as allies because all the other potential allies have agendas they want to impose in return for help. They are fighting for freedom, not for rights within our culture. Since freedom doesn’t exist in our culture then theirs is truly the same.”³⁷

of our own making and find our way back to the earth, we will have a lot to learn from them.

Back in Britain, let’s expand and escalate our action. In the conflict over road building ecological direct action took on the STATE and WON. Let’s zero in on particular attacks on wildness and stop them one after the other.

We have the power to defeat some of civilisation’s attacks on the wild, both here and in the hotspots; will we unleash it? While community mobilising may win the day in some battles, sometimes ‘vanguard’ action is called for. Here lies a contradiction for us. The militant action needed could in fact alienate and hinder the (r)evolutionary process. It could result in increased state repression and a cut in public support. These are big problems but do not mean we should preclude militant action—for the price may be worth paying. After all, Thumb in the Dam struggles aim to protect ecological diversity while waiting not just for the *possibility* of global (r)evolution but the certainty of industrial collapse. As warriors for the earth we must put the earth first!★

Even the Little Steepingford Ramblers’ Association was not without its hooligan element.

gang unity forged between us, two tribes of the outdoors. I couldn’t agree more.

Many committed to the wild will not engage in our (r)evolutionary organising. They may scent defeat and futility or simply disagree with our ‘political’ aims. This is understandable. Thumb in the Dam resistance enables those without hope for any positive change *in* culture to take action, by militantly defending wildness from negative change *by* culture. In this they can create hope for nature even if they see little hope for humanity. In the masses of climbers, walkers, hill runners and mountain risk freaks is an untapped force, that if unleashed could become a formidable biocentric army for the wild. Against such a force incursions like the Cairngorm Railway would have little chance.

Through walking the wildlands we become more able to defend them and unite with others who hold them in their hearts. As John Muir said: ‘One days exposure to mountains is better than a cartload of books.’ Or a radical eco rag like this for that point.

Defending the Land: Immediate British Objectives

Having gone through each of the categories in turn I’ll outline some objectives for British habitat defence. These I believe are realistic objectives, some of which we have already got our teeth into. In defending the wildness of our isles we can find both great peace and great excitement. We have shown ourselves capable of being adequate habitat defenders. Let us march on to the defence of many more.

1) Build Bio-regional Defence: Locally we should all continue to expand knowledge of our bioregions and take action when important habitats are threatened. Our ability to generalise the skills and confidence needed for direct action is what will protect areas.

2) Save Thorne/Hatfield Moors and Kick-start a National Cycle of Successes: Despite considerable success throughout the 90s direct action is often seen as a last stand rather than a tactic that wins. As a network we should pull together for a loud and undeniable victory which can catalyse others. The defence of Hatfield Moors is an excellent terrain of struggle. The habitat is very precious, on the brink of unrecoverable damage and yet it is winnable. It’s strategically and ecologically in all our interests that the campaign succeeds. [The campaign has succeeded!]

3) Keep Camp Culture Alive: The high cost of evicting action camps is the reason many habitats are still alive. As recently as 2001 the state cancelled the Hastings Bypass when camps were threatened. Unfortunately the last few years have seen a steady decline in camps. If allowed to continue a decline in our threat potential to stop developments may follow. It’s make or break time. We should do all we can—as predominantly urban activists—to keep camp culture alive; otherwise much of the ground gained by the Land Struggle Period could be lost.

At the time of writing there are only three ecological defence camps. The responsibility for aiding them lies with all of us—not just those groups nearest. Tat, cash and bodies are always needed on site. Next time the bailiffs go in we should descend en masse to kick shit, up costs.

Ok, so I sound a bit old school; after all many of us lived on camps but now choose not to. However we should not let *our* present cloud the continuing and future importance of camps. *For nearly ten years there has not been one month in which a camp hasn’t held out against development. Let’s make sure we can say the same in another ten.*

4) Increase Action on the Wild Periphery: Our movement for the wild has too long neglected the wild areas far from the cities. As many in our circles spend more time ‘out in it’ this action will increase. Let’s remember to pack a wrench as well as our waterproofs!

A concerted effort should be made to push militancy among the many tens of thousands who walk the wild. We should aim to empower those who don’t wish to ‘join’ our ‘movement’, but

nevertheless embrace the land ethic and want to defend the areas they love. Boltcroppers for every hiker!

Links should be consolidated with the small number of organisations representing non-ruling class interests in the wilder parts of the British countryside (prime among them of course the Crofters Union²⁴).

We should build towards a future where we can make significant interventions on behalf of threatened habitats even when they are far from 'activist centres'. Until then, it's monkeywrench gang time!

Given the onslaught of climate change and the highly fragmented nature of British ecology—especially in England—ecological restoration is essential from a Thumb in the Dam perspective. Isolated reserves will be little use in the long term,

what is needed here is the regeneration of big ecosystems that can manage themselves. Before we are finished let's see bison and wolves in the Cotswolds!

Defending the Living Sea

Most of this earth is covered by sea. The oceans, birth place of all life. Despite civilisation's ravaging they remain wild. Two centuries ago Byron said it well:

"There is a murmur on the lonely shore. There is a society where none intrudes. By the deep sea and music in it's roar. Roll on thou deep and dark blue Ocean. Four thousand fleets sweep over thee in vain. Man marks the earth with ruin. His control stops with the Shore."

Since Byron's time the fleets have grown. Huge factory ships sweep the seas leaving ruin in their wake; fisheries which must have seemed endless now brought to the edge by machines which must have been unthinkable;²⁵ giants of the sea hunted to extinction. Yet Byron is still right. The oceans are the largest wilderness left on earth, injured but untamed.

It is unlikely that the ecologies of the seas will suffer the fate of many of their land cousins; debilitated, denuded and finally enclosed within the prison of agriculture.²⁶ Yet many are under serious threat of being wiped out. In the seas are some of the planets oldest species and systems, survivors of hundreds of millions of years. Now, they drown in man.

Climate change, pollution, factory fishing, whaling, oil exploration and increasing volumes of shipping are some of the main threats to the oceans. How, if at all, can we combat these attacks?

As always, when looking into the chasm we have to accept that much of what is alive today will be dead tomorrow, whatever we do. Coral reefs are one example. Already climate change induced warming of high sea temperatures has killed most of the coral reefs in the Indian Ocean, Western Pacific and Eastern Pacific. Corals in the Caribbean and Brazil have also been badly damaged.²⁷ Given the time lag inherent in climate change, if we had global insurrection tomorrow (unlikely), we could still expect the death of most of our reefs and the life that depends on them. Depressing, but as the hackneyed old slogan goes: Don't Mourn, Organise! We CAN take some practical action to slow some assaults on the sea.

Despite the spectacular image of Greenpeace dashing around in natty zodiacs, relatively little direct action has been carried out to protect the seas. This is largely for entirely understandable reasons. We are, after all, land mammals and few of us spend much time at sea. When compared to the odd roll of poly-prop the cost of running anything sea-worthy is astronomical. Yet we in the British Isles are ideally placed to get to grips with the problem.

So far the only serious group to take Gaia's side on the oceans is the Sea Shepherd Conservation Society. Its founder, Paul Watson, declared: 'Earth First! is mother earth's army and we are her navy'. Their first action was the 1979 ramming and disabling of a whaling ship off the Portuguese coast. The whaler managed to limp into port only to be mysteriously bombed a few months later sunk with a magnetic limpet mine.

Since then Sea Shepherd has been confronting enemies of the oceans with an arse kicking

in their traditional lands. They don't have hunting licences, just an unbroken history thousands of years old.

FPCN activists visited the scattered camps to see how they could help. They provided basic humanitarian aid and protested against the local powers. Best of all, they hired a truck and rescued abducted Hadzabe children from enforced schooling and returned them to their families in the bush. There, as everywhere, missionaries are the advance guard of civilisation. The simple presence of 'Westerners' who decry the missionaries for the fools, charlatans and profiteers they are strengthened the tribal resolve.

"The hatred against these strangers grows among the Hadzabe. FPCN stands ready to sanction and assist with the burning out of churches on Hadzaland following a similar explosion where a church was completely destroyed by local tribespeople."³⁴

Many thousands of miles away, the last gatherer-hunters surviving in the Philippines face similar threats. Like many tribes across the world, genocide has whittled down the Agta to the low hundreds. They are 'Red Book' humans! They have become landless refugees in their own land.

In 2001 FPCN raised £8,000 and purchased 10 hectares of stolen Agta tribal land in Dipuntian. This land is meant to be a base for a significant section of the Agta population and for action against local logging of the rainforest. FPCN have called for sorted Western visitors to help out on the reserve and in the resistance:

"I would suggest you stay here and look what can be done. Watch the non-hierarchical and soft way of Agta life, so you will perhaps love them and feel the need to protect them."³⁵

FPCN is now trying to raise another £10,000 to buy an adjoining piece of land for another 100 Agta who want to stay. FPCN list a number of things western visitors can do at Dipuntian from 'watch the small scale loggers not to cut the trees to Keep missionaries out of the place. The Agta feel safer when foreigners are around.'³⁶

In Task IV I go into detail about practical work that can be done to support rebellions beyond the core, much of which is directly applicable to the defence of primal cultures. So to avoid repetition I will not go into tactical detail here. The two campaigns mentioned above provide good examples of what might be needed to slow cultural meltdown.

Defending Living Culture: Immediate Objectives

I will draw out some objectives to further us on the path to aiding tribes in general and gatherer-hunters in particular.

1) Forge Links with Allies: A real effort needs to be made to link up supporters of gatherer-hunters interested in solidarity actions and direct aid. The lack of a well functioning network is hindering activity. [In the first published version of this text I advocated 'consolidating links with FPCN'. Unfortunately despite a lot of good will on the side of EFLers FPCN's *leader* had been obstructive, rude and downright difficult to deal with from the start. Other problems specifically around FPCN and the Agta have also surfaced. Despite this I believe they have done more to help out gatherer-hunters than nearly any other Western group. This should not blind us to the group's serious problems, but instead underline the need for activists from our networks to learn from and in large part replace them.]

2) Provide Direct Aid to Gatherer-Hunters, Starting with the Agta: By aiding the Agta we can have a real impact on a perilous situation. Only £10,000 is needed to buy the adjacent land to the Dipuntian reserve. Raising a substantial proportion of the cash needed should not be impossible. Flights from Europe plus internal connections to the reserve cost just over £400. Once there living costs are low. This is an unusually cheap opening for on-the-ground support work, not to mention an amazing experience. Don't let this opportunity pass by! [People didn't - see below.]

The Agta are defenders of the local rainforest. Earlier I stated that the Philippines are one of the three hottest hotspots, in facing global biological meltdown one of our highest priorities. Here we have an opportunity to give direct aid and on-the-ground solidarity to an endangered gatherer-hunter community struggling to protect an ecology within one of the three hottest of the global hotspots, in one of the few Majority World countries with active

whatever support we can when their boats visit Britain. We should raise awareness of their mission and do solidarity actions if and when they are arrested. Despite reservations, more Brits should volunteer to serve aboard Sea Shepherd vessels.

2) Expand Neptune's Navy: There is no innate reason for the non-existence of European Sea Shepherd style boats. This project could take years to come to fruition but would be immensely valuable as both a tool for direct action and a training ship for marine wilderness defenders.

3) Sink 'Em My Hearties: No massive organisation is needed to scuttle a whaler or similar ship. Serious thought should go on before such action is taken. 'Illegal' whalers should primarily be targeted as they are presently trying to expand their 'harvest'. All that holds us back is our fear.

4) Investigate and Take Action off British Shores: Research needs to be done, similar in scope to that needed for British land habitats, to find out which marine ecosystems are both threatened and within our capacity to defend. Solid conclusions should lead to solid action, setting national priorities for action.

Defending Living Culture

Radical ecology has always taken its cue from indigenous resistance. Our crossed wrench and stone axe symbol holds the very essence of our movement; a fighting unity between primal people and those deep in industrial society who want to wrench their way out.

While the Fourth World survives enveloped within the borders of some First World countries, most indigenous people live in the Majority World. In Europe, only a minority of Sami live in any way similar to our ancestors. Thus as with biological meltdown, the struggle against cultural meltdown calls us 'over the water'.

Beyond the core the tribes are everywhere under attack. Many are engaged in large-scale resistance to leviathan: the Papuans, the Zapatistas and the Ijaw for example. Our circles have already done quite a lot of action to support these indigenous communities and this should continue. Here I am less concerned with them (cultures with significant populations capable of major action), than with those small shrinking wild societies that if left without allies will undoubtedly soon perish. I cover the work needed to aid struggling indigenous communities later at length

Our Isles host fleets of factory ships. A large purse-seiner (above) based in North East Scotland hauls in a catch of herring from the North Sea. How long will these Leviathans roam unhunted?

5) Skill Up: Our circles should try to increase our watery skills. Scuba, ships, zodiacs, sailing, navigation—whatever. Worse case scenario is we have a fun time with little political payoff. Best scenario is we have fun and prepare ourselves for campaigns to come.

in Task IV—Supporting Rebellions Beyond the Core.

There are many scattered individuals trying to help *endangered* primal cultures but no solid network that enables them to co-operate internationally. The nearest to what is needed is Friends of People Close to Nature (FPCN). FPCN has carried out serious no-compromise work around the world. Unfortunately it revolves largely around a man who has severe problems working with other people and has dubious ideas around gender and race. Never the less, many practical things can be learned from this 'network'.

FPCN concentrates less on solidarity actions than with getting out there and helping directly. Two examples of some recent campaigns illustrate their attitude.

Within the territory of 'Tanzania' live the Hadzabe—East Africa's last gatherer-hunters. One band are typical. Pushed to the most marginal land, banned from using the only watering hole in miles unless they perform for tourists, their children abducted by soldiers and forced into schools; under siege from all sides by settlers & missionaries. While Western White trophy hunters armed with modern weapons zip around in Land Rovers decimating the local mega-fauna, Hadzabe hunters are jailed for hunting with bows and arrows

Two Sea Shepherd warriors (an American Indian and a Cornishman) send half the Icelandic whaling fleet to Davy Jones' Locker in 1986.

attitude. Slicing the nets of driftnetters, ramming and scuttling whalers, and sabotaging seal and turtle kills. As I write they are patrolling the waters off the Galapagos Islands. The last year has seen them make headway in eliminating the ecocidal ships attacking this immensely important area.²⁸ If they succeed it will be one of ecological direct action's biggest victories. It should be no surprise that they might be responsible. In fact, if it wasn't for Sea Shepherd, mass commercial whaling probably would have restarted, pushing numerous species to extinction.

Though predominately based in North America, Sea Shepherd has operated all over the world carrying out many operations in European waters. Most recently Norwegian and Faeroes whalers have been targets. Its mere presence has a serious deterrent effect. The Italian fishing industry halted its most damaging practices on hearing Sea Shepherd had entered the Mediterranean.

Though a smattering of Brits have crewed, the number is surprisingly small when you think how many of our mad lot it might appeal to. There are a number of reasons. Real lasting links have never been made between us and Sea Shepherd. Personality politics is also a factor. The figure of Captain Paul Watson is both immensely inspiring and deeply off-putting to circles with a dislike for hierarchy and the media. Our height was also their low. The mid to late '90s coincided with a relatively less active period for Sea Shepherd. That period has thankfully now ended with two large boats in the fleet and a growing international organisation.

Though few links exist now, if ever there is a meaningful attempt by our circles to contribute to the defence of the seas, we will have lots to learn from Sea Shepherd. A major driving force behind their success has been good strategy and well applied tactics. So let's have a look.

Most of Sea Shepherd's most spectacular actions can be divided into two categories—Sea Confrontations and Harbour Sabotage. The terrain of struggle they operate in is one of both waves

and laws. A lot of what they confront is illegal and often beyond state territorial waters. Political considerations make the extradition and jailing of anti-whaling activists difficult.

Sea Confrontations: Slicing driftnets and ramming enemies of the sea is what has made Sea Shepherd famous. The keys to the success of many SSCS sea confrontations is that they're militant—though 'non-violent', media friendly—though not merely stunts, carried out on an international level but rarely against Sea Shepherd host nations, largely against illegal activity, and regularly in international waters. The main key of course is having big fuck-off boats and crews committed enough to plough them into target ships. Keeping these ships running is expensive.

Harbour Sabotage: Sea Shepherd's most infamous action was a daring raid in 1986 that left half of Iceland's whaling fleet at the bottom of a harbour and its major processing plant trashed. This action needed only good intelligence, cunning, limited funds and two brave souls to open up the boats' sea water intake valves. By the time the action was discovered, the two, a Native American and a Cornishman, were on their way to the airport to leave Iceland forever. Since '86 Sea Shepherd has carried out other impressive scuttling, most notably against Norwegian whalers.

So far no-one in Sea Shepherd has served any major time for any of their actions! Despite SSCS glaring victories no other groups have successfully copied them by taking to the seas. It would be excellent if an autonomous Sea Shepherd-like organisation evolved in Europe. But with no such groups coming into existence, those who wish to take action at sea must join the long volunteer lists of SSCS.

Readers who have served aboard Sea Shepherd or have general maritime experience should seriously consider the need for a European addition to 'Neptune's Navy'.

Off-shore fish farming is set to expand massively. Pictured above is the mechanical feeding of fish to fish. It takes approximately four tonnes of wild fish to feed one tonne of farmed fish.

The Sea Shepherd 2 gathers in driftnet. The flag emblems signify the number of Norwegian/Japanese etc. boats SSCS have rammed or sunk.

Much money and commitment would be needed to set it up, but it would be an immense asset to ecological resistance in Europe. Such a project, if handled right, could bring together energy and resources from a range of circles—radical ecotypes, ex-members of Greenpeace’s direct action units, animal liberationists & rights groups, ex-Sea Shepherd crew etc. Indeed, the years have proven that there is significant mass support for radical action at sea—especially when it comes to dosh. Two decades ago, a third of the cost of the first Sea Shepherd boat was put up by the RSPCA. The Faeroes campaign in ‘86 was funded mainly by English school children who raised £12,000 in a save-the-whale walkathon.²⁹

While Sea Shepherd is alone in carrying out militant sea confrontations, the tactic of harbour sabotage has been taken up by others. Even here in Britain serious sabotage was carried out against seal cullers in the mid ‘70s, resulting in the destruction of one vessel and damage to another.³⁰ Across Europe a number of ecocidal ships have been scuttled. Recently, Norway has been the prime target.

On 11/12/01 one of Norway’s main meat processing plants at Loften Dock was destroyed by fire, causing damage totalling at least £1.5 million. Five days earlier, the whaler Nehella had burned and sunk at the same dock costing £150,000. Another whaler, the Nybraena, was damaged when the factory fire spread to the dock. The Nybraena had been scuttled by Sea Shepherd agents in Christmas 1992, for which Norway sought in vain to extradite Captain Watson.

These recent actions also follow another action on 27/2/00. Then, another Norwegian whaling vessel, the Villduen, was destroyed when an explosion sunk the ship at its moorings. The blast collapsed the deck and the ship sank to the bottom of the harbour half an hour later. Sea

Shepherd stated publicly that they were not responsible. It has always denied the use of explosives and this is what it said about the attacks. ‘We neither take, nor condone actions that might result in any injuries. None the less, we are pleased for the whales!’³¹

While putting a new fleet afloat would take a lot of work, basic harbour sabotage takes few resources bar pluck. While the recent Norway bombing and arson were obviously very effective, monkeywrenching can be effectively done with just hand tools. An exact and proven guide to the subject has been written by Sea Shepherd Agent #013. S/he says in the intro:

“With the scuttling of ecologically destructive ships comes the possibility of doing tens of millions of dollars of economic damage. We are talking *megatage* here. The joy of bringing down a whaler can be one of the great pleasures in an eco-warrior’s life. It can be the most treasured of feathers in one’s spiritual war bonnet.”³²

S/he should know—the author was one of the team that scuttled the Nybraena in 1992.

Most coral reefs are now either dead or doomed. Retribution is needed.

Sea Shepherd ‘escorts’ dolphin-killing Mexican tuna boat away from Spotted Dolphin pod, 100 miles west of Guatemala.

We have looked at direct action tactics used in the defence of the sea and posited some possible conclusions. Now maybe it’s worth looking at the situation around the British Isles directly. Beyond the unfrontable cataclysms of climate change and the like, a variety of processes threaten the marine ecologies around our shores. The oil industry (especially expansion into the Atlantic frontier), factory fishing, industrial shoreline expansion, marine aggregate dredging and pollution.

In my opinion we can have little impact on pollution given the continuation of the system. It’s a hydra with too many heads/outflow pipes. The odd concrete blockage might be good for press attention and a bit of justice, but it’s not really meaningful.

Of the other threats, we have only done action against industrial shoreline expansion. The best example is the campaign against the Cardiff Bay Barrage, which though unsuccessful is credited with discouraging some other similar schemes. A similar struggle could soon arise at Dibden Bay on the edge of the New Forest. These campaigns are really just an extension of the land struggles, with the possible added excitement of zipping around in dinghies, so I will not go into detail here.

The oil industry at sea has been largely ignored by us bar the ridiculous debacle that was the Sea Empress Spill Anniversary Action. As it happened it would have been far better had we ignored it. (Though all credit goes to Reclaim the Valleys, who

tried to rescue the situation when the organising group ‘Cardigan Bay EF!’ went AWOL on the day—after 70+ activists from around the country turned up!) So far only Greenpeace has done actions around the Atlantic Frontier. It is beyond me how with our present resources we could carry out *direct* defence of this globally important marine ecosystem—but let’s at least get our grey cells working on the issue. Though it’s not actually getting in the way on the Atlantic Frontier itself, blockades etc of Britain’s oil infrastructure may be useful.³³ When jewels like the St. Kilda region are under threat, action must be taken.

As for factory fishing, Britain is both a base and a stopping port for fleets of driftnetters and klondkyers from around the world. Look through the eyes of agent #013 to see the work ahead.

Fishing quotas are resulting in the elimination of over half of the British fishing fleet. Unfortunately this is not automatically a cause for celebration. The elite are using the collapse of fish ‘stocks’ to eliminate small fishing boats while leaving large factory boats to trawl the seas. There is potential for some level of joint action by radical ecologists and militant fishing communities against big ships and the economic forces steering them. The barriers and conflicts which would need to be overcome to build such a unity are maybe too big and it’s maybe too late already.

Aggregate dredging—aka quarrying the sea—is set to become a significant threat to marine life around this island. Massive expansion plans are afoot which among other things threaten ‘fish stock breeding areas’. Fisherfolk in France have already shown their opposition, and ironically there could be a point of tactical unity between us around this attack. As far as I know, no one is organising on this.

Defending the Living Sea: Medium Term Objectives

I have been more vague when dealing with defending the living sea than I was when discussing defending the living land. This is not a reflection of their relative importance; just on our position today and the powers we have developed. Though hotspot style analysis does exist for the seas, it is both less developed, less accurate and, for us anyway, less relevant. As mentioned before, some of the most diverse marine ecosystems—such as many coral reefs—are probably doomed thanks to climate change. Nothing we can do will save them. However, I do believe there are some steps we can take to move towards the challenge of defending the living seas

1) Engage with Sea Shepherd: The SSCS has a UK contact but no office. We should build connections and aid them if possible. At the very least we should distribute their material and give
